# Emerging Technologies to Increase the Penetration and Availability of Renewables:

## Energy Storage – Executive Summary

Presented to:  
CEC Integrated Energy Policy Workshop

Presented by:  
Dr. Robert B. Schainker, EPRI  
Senior Technical Executive  
Electric Power Research Institute  
[rschaink@epri.com](mailto:rschaink@epri.com)

July 31, 2008

# Historical Perspective

- Historical foundations for utility electric energy storage:
  - Pumped hydro (US: ~2.5%; Rest of World: 5 - 15%)
  - EPRI Prototypes: Chino Battery (~1988); McIntosh CAES (~1990); PEAC SuperCap (~ 2002); NYPA FW (~2003); AEP NaS (~2006)
  - EPRI benefit analysis tools: Dynastore & Dynamics (1980s and 2004)
- Joint EPRI-DOE Energy Storage Handbook
  - First Published December 2003
- CEC/PIER Demonstration/Field Trail Projects (~started in 2004)
- Field Trials Of Emerging Technologies Began In 2002:
  - AEP NaS Battery; Alaska NiCad Battery, NYPA Flywheel; TVA SuperCap FACTS, HECO SuperCap-Wind System, PG&E ZnBr, and others
- Recent developments:
  - New CAES design using CT as central component of plant. Can use below ground or above ground air storage system.
  - Li-Ion Battery, Flywheels, SuperCaps for PQ/VAR control

# Energy Storage Options: Insights

## 1. Storage Plants Fall Into Three Economic Categories

- Peak: Battery, Flywheel, Super-Capacitor, SMES
- Intermediate: CAES, Battery (Flow Type)
- Base Load: CAES, Pumped Hydro, Battery (Flow, NaS)

## 2. Dynamic Benefits From Storage Plants Are 5 To 10 Times Greater Than Their Load Leveling Benefits

- Millisecond Response: Battery, SMES, Flywheel, Capacitor
- Minute Response: CAES, Pumped Hydro

## 3. To Quantify Benefits, Tools Must:

- Account for Strategic As Well As Operational Benefits
- Be Multi-Disciplinary - Generation, T&D, Corporate, Customer
- Account for Unit Commitment and Chronological Dispatch
- Load duration curve approaches produce erroneous results

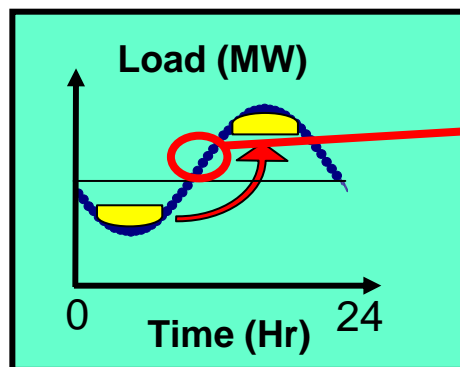

# What is Electricity Energy Storage and what are best applications?

**Definition:** Electricity energy storage is any means of taking power directly from power plants or the electric grid and storing it for later use.

## **Examples:**

### **Load Leveling**

### **Ramping:**

### **Frequency Regulation:**

## Problem: Renewable Plants Produce Power Output Oscillations or Provide Power When Not Needed, Which Limits Renewable Resource Value

### Solution:

Deploy Electric Energy Storage Shock Absorber Plant, Which Is Sized and Controlled To Reduce Load Leveling, Ramping, Frequency Oscillation and/or VAR Problems

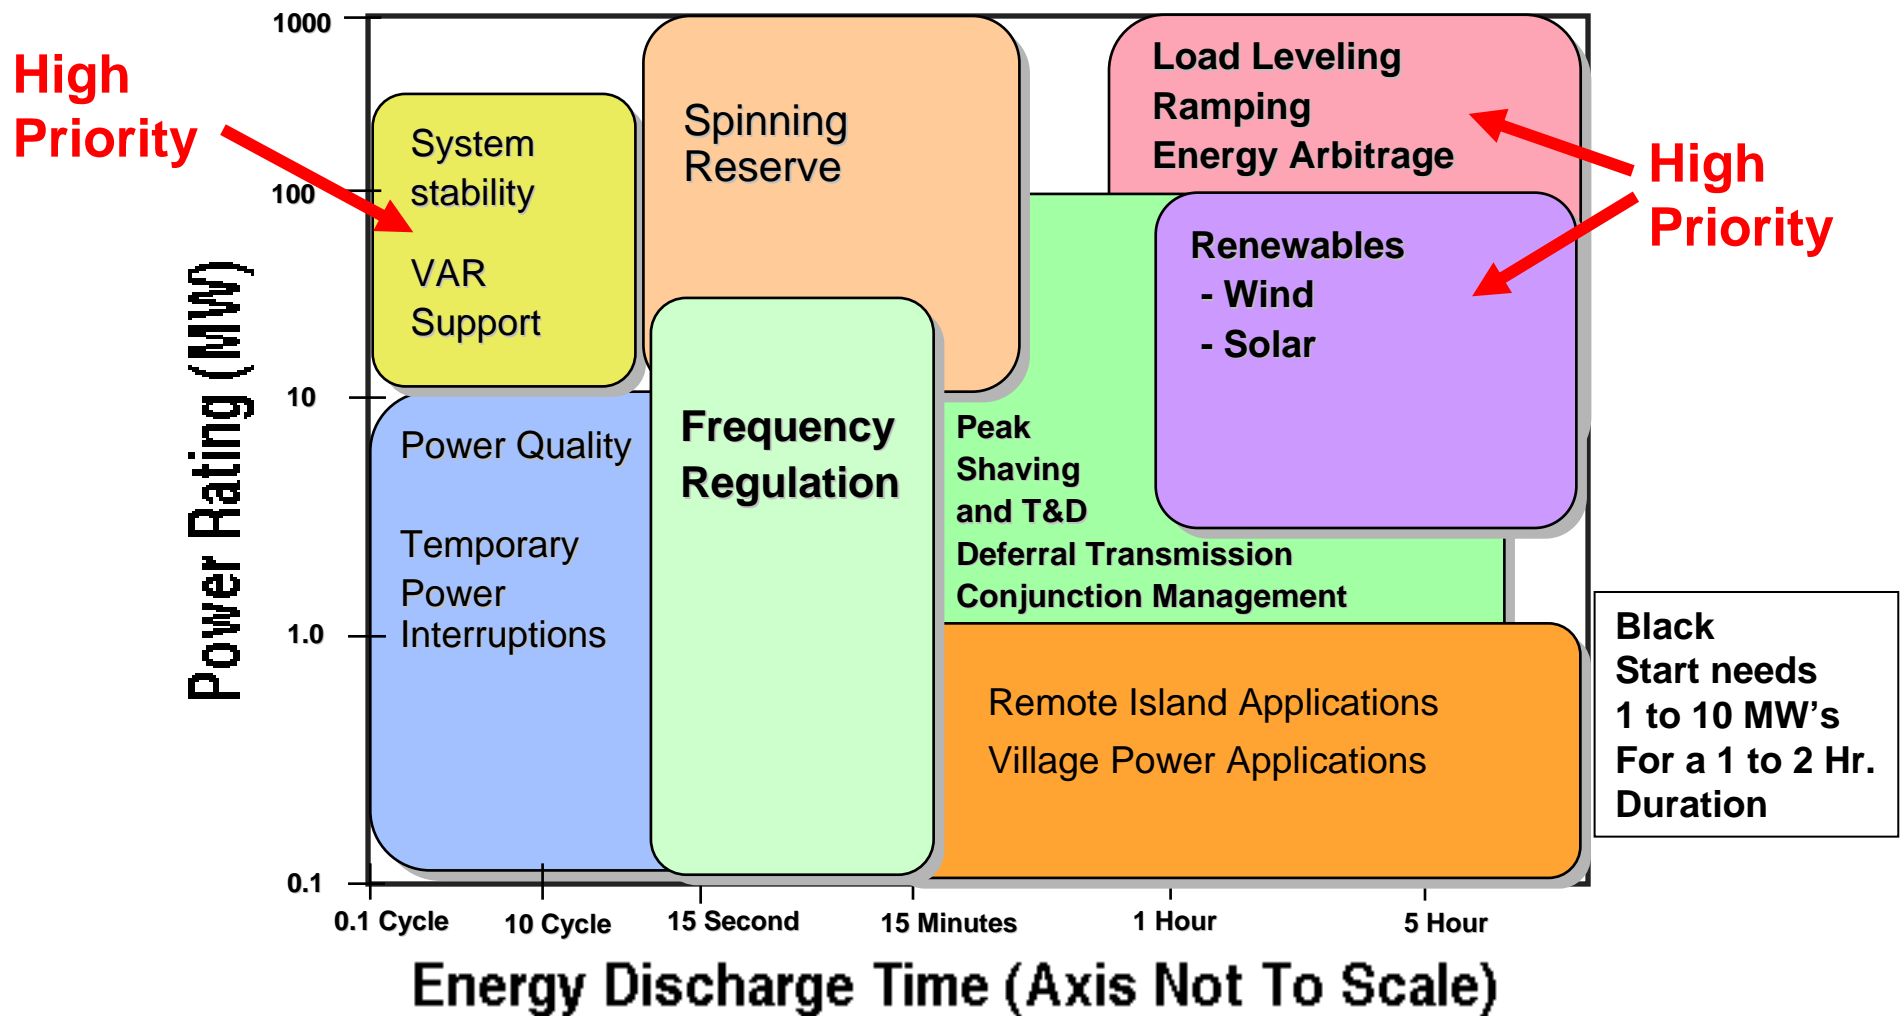

# Types of Electric Energy Storage Technologies

- **Pumped Hydro**
- **Compressed Air Energy Storage (CAES)**
- **Flywheels**
- **Batteries**
- **Super-Capacitors (SuperCaps)**
- **Superconducting Magnetics**
- **Thermal Storage**
- **Fuel Cells (reversible)**
- **Hydrogen Storage**

# Electric Energy Storage Applications

(All Boundaries Of Regions Displayed Are Approximate)

# Capital Cost Comparison of Energy Storage Plants

This column determines how many discharge hours one can afford to build

| Technology                           | \$/kW     | + | \$/kWh*     | x | H    | = Total Capital, \$/kW |
|--------------------------------------|-----------|---|-------------|---|------|------------------------|
| <b>Compressed Air</b>                |           |   |             |   |      |                        |
| - Large, salt (100-300 MW)           | 590-730   |   | 1-2         |   | 10   | 600 to 750             |
| - Small (10-20MW) AbvGr Str          | 700-800   |   | 200-250     |   | 3    | 1300 to 1550           |
| <b>Pumped Hydro</b>                  |           |   |             |   |      |                        |
| - Conventional (1000MW)              | 1300-1500 |   | 80-120      |   | 10   | 2100 to 2700           |
| <b>Battery (target) (10MW)</b>       |           |   |             |   |      |                        |
| - Lead Acid, commercial              | 300-400   |   | 400-500     |   | 3    | 1500 to 1900           |
| - Advanced / Flow                    | 300-400   |   | 500-800     |   | 3    | 1800 to 2800           |
| <b>Flywheel (target) (100MW)</b>     | 300-400   |   | 600-800     |   | 3    | 2100 to 2800           |
| <b>Superconducting (1000MW)</b>      | 300-400   |   | 800-1200    |   | 3    | 2700 to 4000           |
| <b>Magnetic Storage (target)</b>     |           |   |             |   |      |                        |
| <b>Super-Capacitors (best today)</b> | 300-400   |   | 12000-18000 |   | 1/60 | 500 to 700             |
| <b>(target)</b>                      | 300-400   |   | 1200-1800   |   | 1/60 | 320 to 430             |

\* This capital cost is for the storage "reservoir", expressed in \$/kW for each hour of storage. For battery plants, costs do not include expected cell replacements. The cost data are in 2008 \$'s and are updated by EPRI periodically. Costs do not include permits, contingencies, interest during construction and the substation.

# Pumped Hydro Energy Storage Plant

Schematic of Generic Pumped Hydro Plant

Upper Reservoir of TVA's Raccoon Mountain PH Plant

Operational Date: 1979

Capacity: 1620 MW

Max. Discharge Duration: 22 hrs

# CAES Technology Experience

- **110 MW – 26 hour Plant:**  
**McIntosh Alabama**  
**Operational: June 1991**
  - Load Mngmt/Regulation
  - Buy Low, Sell High
  - Reliability ~ 95% to 98%
- **290 MW – 4 hour Plant:**  
**Huntorf, Germany**  
**Operational: December 1978**
  - Peak Shaving/Regulation
  - Spinning Reserve
  - Reliability ~ 95% to 98%

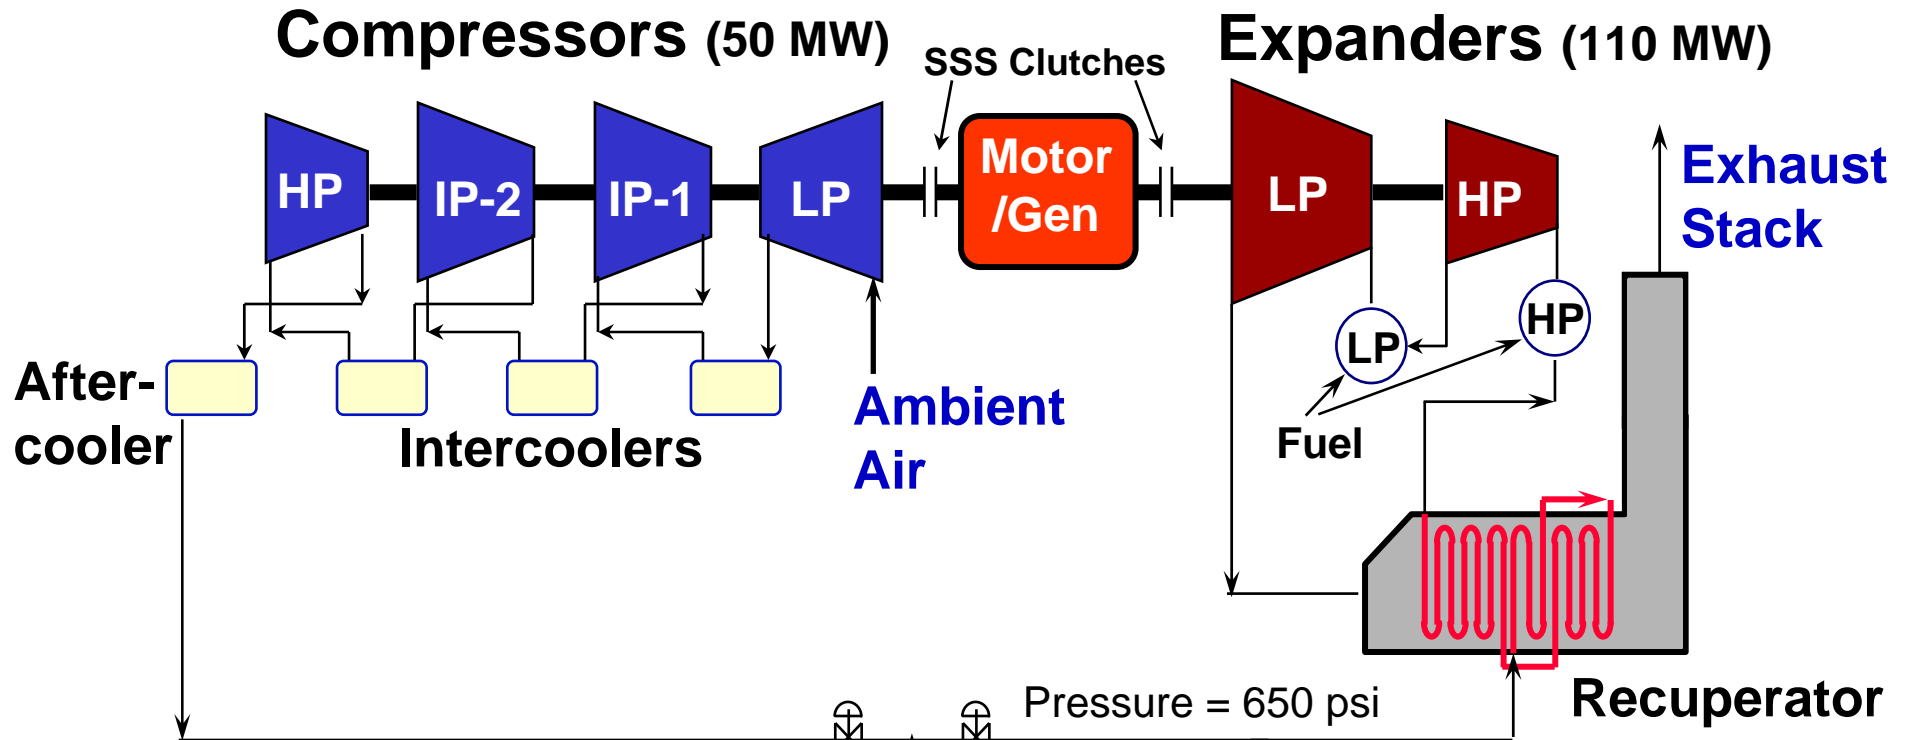

# Alabama CAES Plant: Design Schematic

## - - - First Generation Design - - -

Cap. Cost (2008 Dollars) ~ \$730/kW to \$830/kW + Substation, Permits & Contingencies

### Salt Cavern Air Store:

Distance to Surface = 1500 Ft  
Height = 1000 Ft  
Avg. Diameter = 250 Ft  
Volume = 19.6 MCF

**Underground Storage Cavern:  
A Solution Mined Salt Cavern**

|              |      |
|--------------|------|
| Heat Rate    | 4100 |
| Energy Ratio | 0.81 |

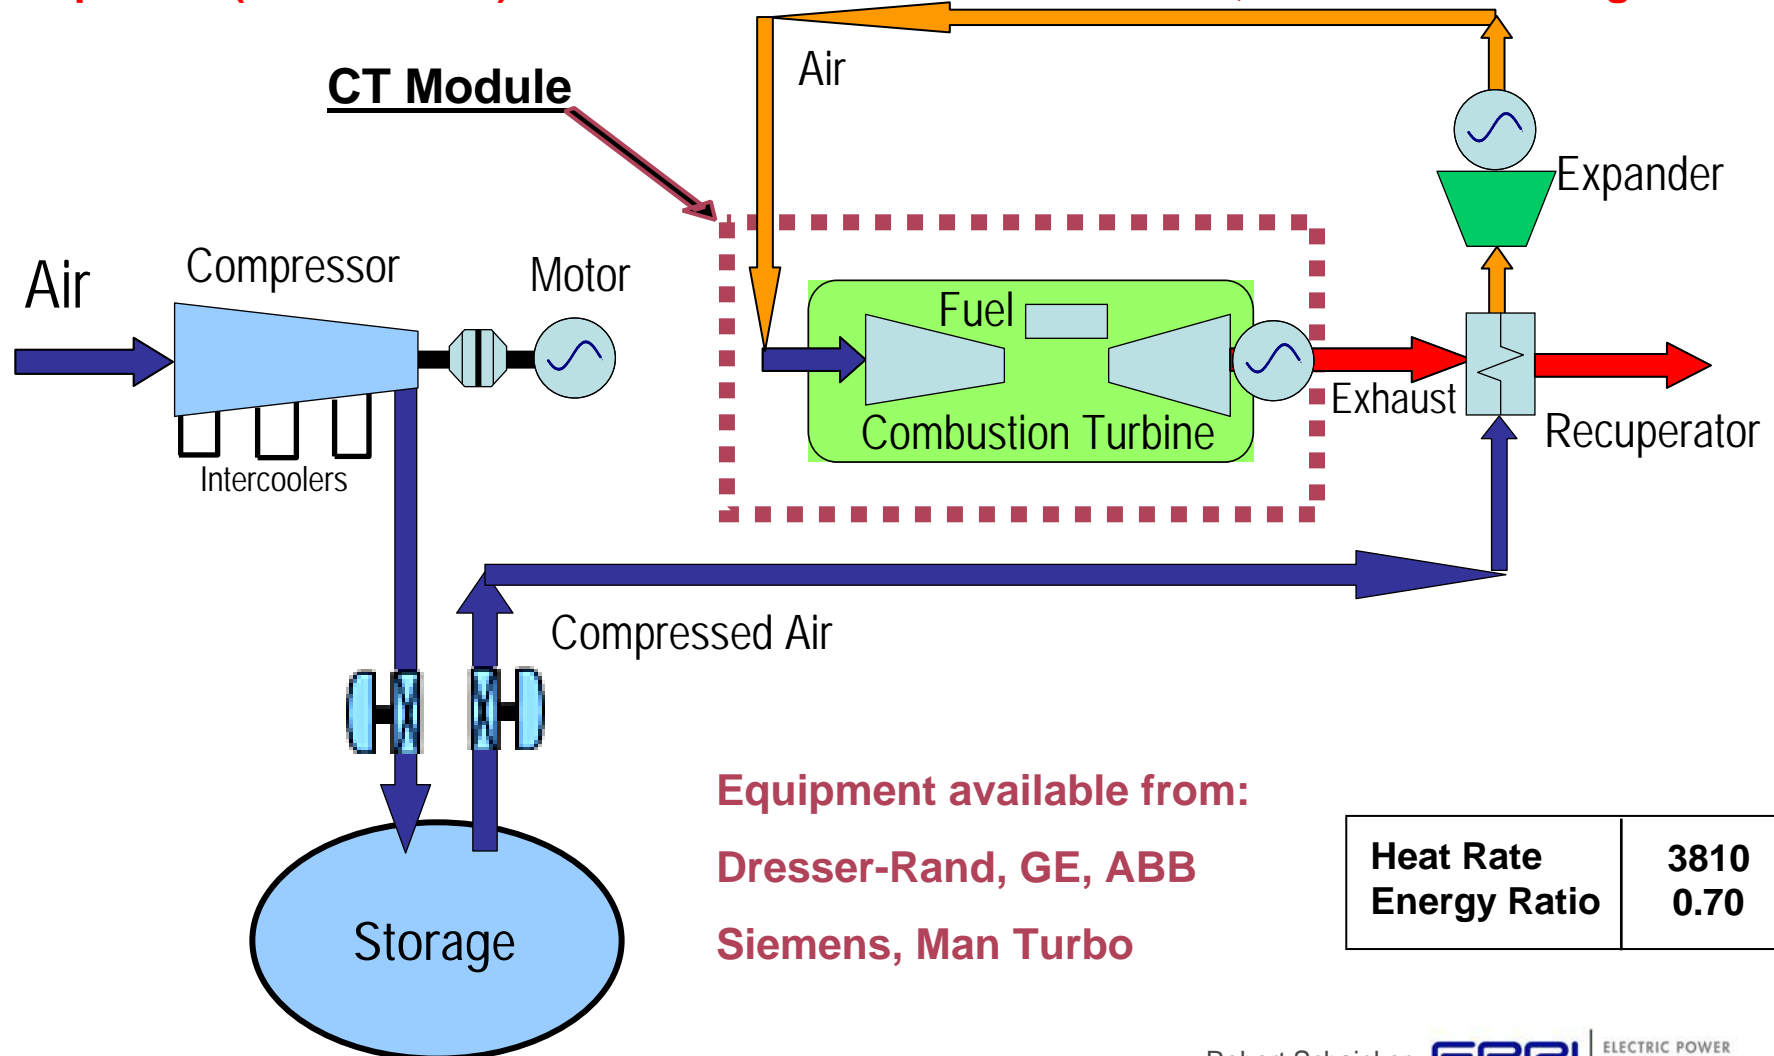

Equipment from:  
Dresser-Rand

# Advanced CAES Plant: Schematic

## - - - Second Generation “Chiller” Design- - -

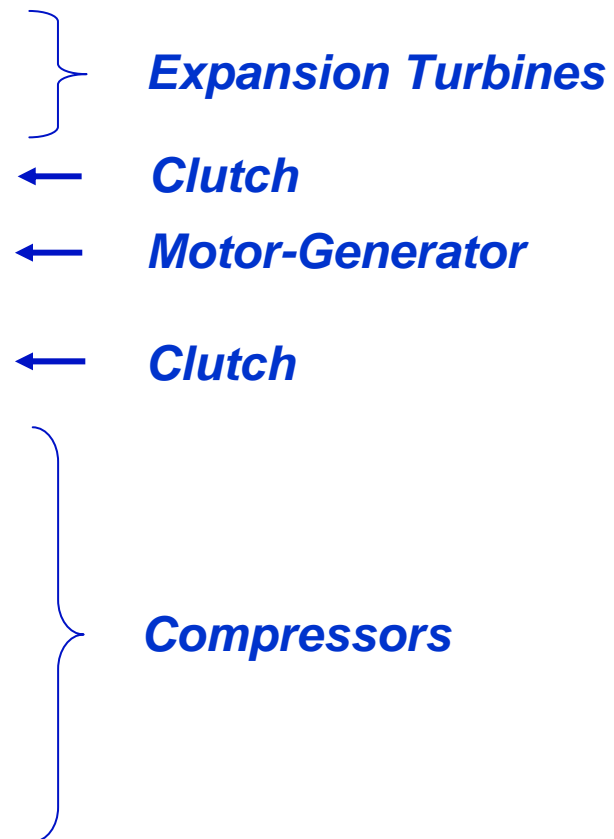

Cap. Cost (2008 Dollars) ~ \$600/kW to \$750/kW + Substation, Permits & Contingencies

Equipment available from:  
Dresser-Rand, GE, ABB  
Siemens, Man Turbo

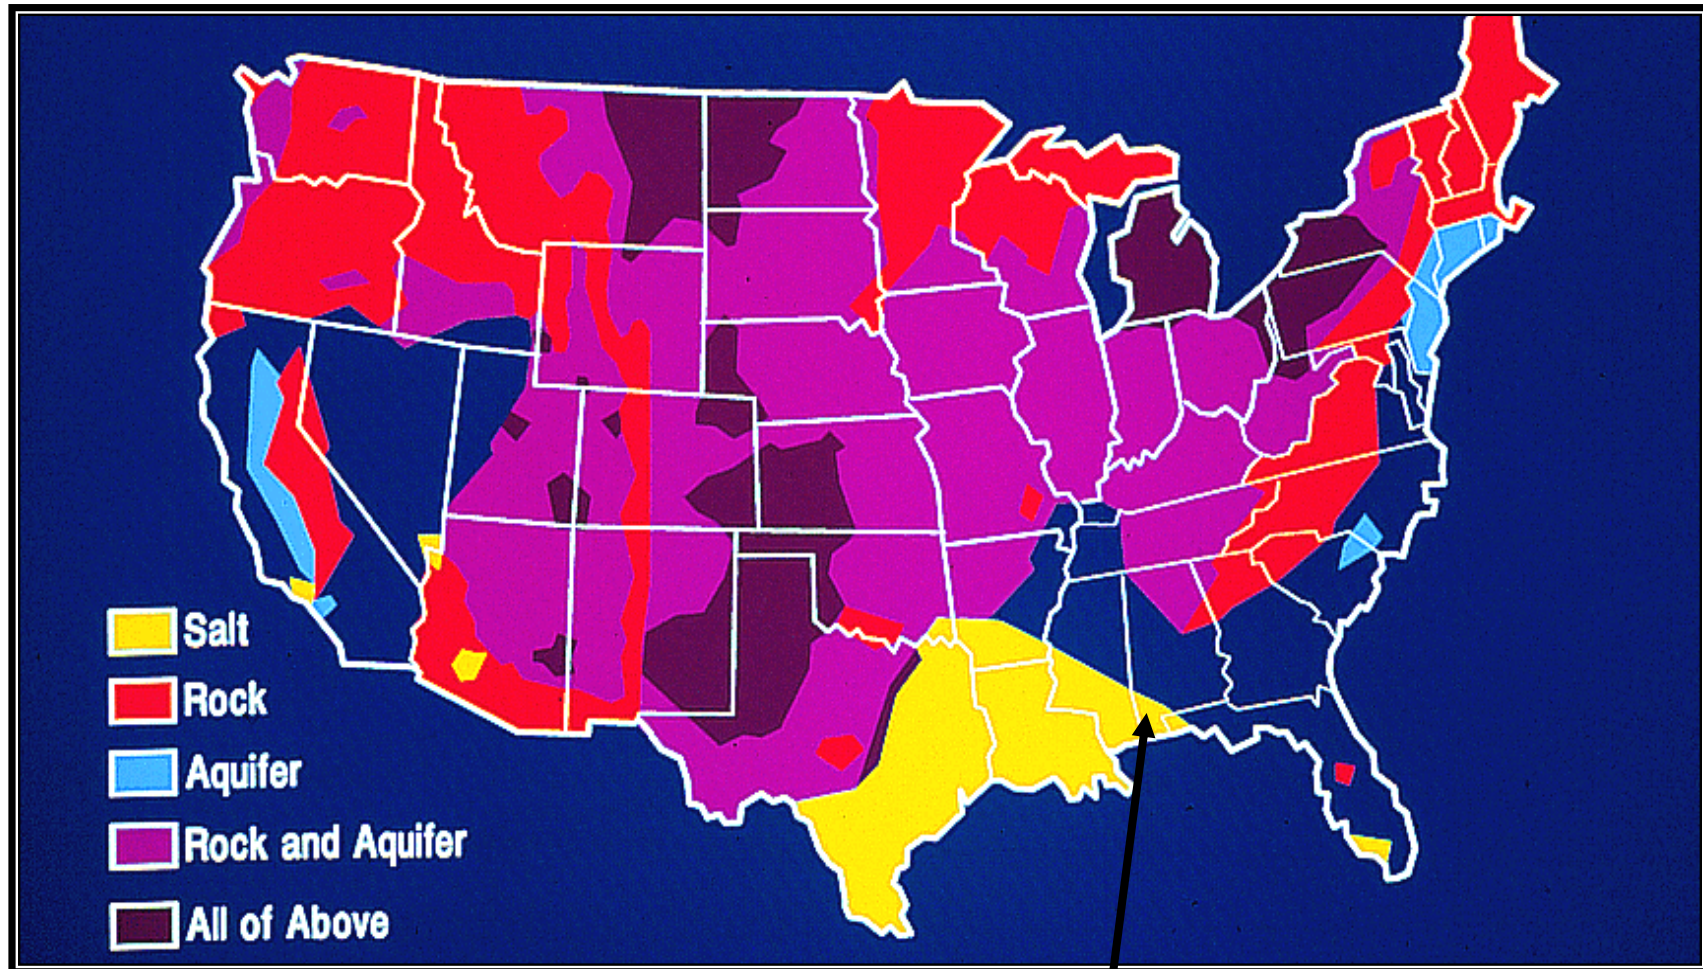

|              |      |
|--------------|------|
| Heat Rate    | 3810 |
| Energy Ratio | 0.70 |

# Alabama CAES Plant: 110 MW Turbomachinery Hall

# Geologic Formations Potentially Suitable for CAES Plants That Use Underground Storage

Alabama CAES Plant

# Battery Energy Storage

**Lead-Acid Battery Energy Storage Is A Proven, Commercial Technology. Many Other Types of Battery Technologies Are Now Commercially Available. Of Particular Interest Are Electrolyte Flow-Base Batteries That Are About 10 Times Less Expensive Than Lead Acid Options For Each KWH Of Stored Energy.**

**10 MW – 4 Hr Lead Acid Battery Plant At  
Southern California Edison (1988)**

## Issue:

Deep Discharge Battery Cells Need To Be Replaced At About Every 10 Years. This Increases Life Cycle Capital And Maintenance Costs.

# Flywheel Energy Storage

**High-Speed Beacon Flywheels Used For  
Frequency Regulation (Rating of Each FW:  
100KW for 15 Min. Discharge)**

# Superconducting Magnetic Energy Storage (SMES)

- **SMES Is A Viable New Technology For PQ and Increased Transmission Asset Utilization Applications**
- **About 6 Small Plants Are in T/D Operation For PQ Application (1 to 3 MW, with 1 to 3 Seconds of Storage)**
- **High Temperature Superconductors Will Lower SMES Costs**

**10 MW – 3 Sec. Coil Tested  
For Transmission Stability**

# SuperCap/UltraCap Demo Plant

Hawaiian Electric Company, Inc. (HECO) and S&C Electric Company held on Jan. 17 a dedication at Lalamilo Wind Farm near Waikoloa on the Big Island of Hawaii to mark the installation of the first PureWave® Electronic Shock Absorber (ESA), an innovative grid stabilizing device for wind farms.

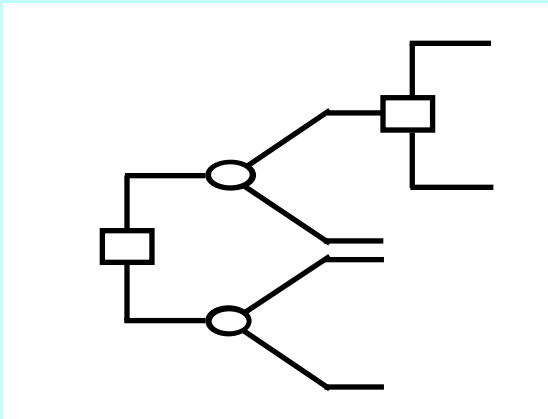

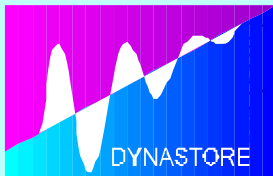

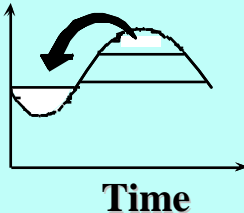

|                         |                  |
|-------------------------|------------------|
| Nominal voltage         | 800 V DC         |
| # of Ultracapacitors    | 640              |
| Max. power / Duration ~ | 260 kW / 10 sec. |

**HECO SuperCap Demo (April 2006)**  
**Lalamilo Wind Farm**  
**Uses Maxwell SuperCaps and an**  
**S&C Electric AC-DC-AC Inverter**

Note: This demo plant was unfortunately destroyed by a 6.7 magnitude earthquake on 10/15/06

# Electric Energy Storage: Value Proposition

| Types of Benefits   | Physical System   |  | Corporate Perspective   | Customer Perspective |

# Don't Let The Texas Grid Emergency Caused By Wind Generators Happen In California

## Reuters New Flash

### Loss of Wind Causes Texas Power Grid Emergency

Wed Feb 27, 2008 8:11pm EST

HOUSTON (Reuters) - A drop in wind generation late on Tuesday, coupled with colder weather, triggered an electric emergency that caused the Texas grid operator to cut service to some large customers, the grid agency said on Wednesday.

Electric Reliability Council of Texas (ERCOT) said a decline in wind energy production in west Texas occurred at the same time evening electric demand was building as colder temperatures moved into the state.

The grid operator went directly to the second stage of an emergency plan at 6:41 PM CST (0041 GMT), ERCOT said in a statement.

System operators curtailed power . . . .

## One of Edison's Most Famous Quotes:

***"In Periods of Profound Change, The Most Dangerous Thing Is to Incrementalize Yourself Into The Future."***

# Storage Plant Operating Costs

## Operation Costs For All Storage Plants, Except CAES:

$$\begin{aligned}
 \$/\text{KWh} &= \$/\text{KWh-In for Charging} \times \text{KWh In/KWh-Out} \\
 &\quad + \text{Variable O\&M} \\
 &= \text{Incremental Cost for Charging Energy / Efficiency} \\
 &\quad + \text{Variable O\&M}
 \end{aligned}$$

## Operational Costs For CAES Plants:

$$\begin{aligned}
 \$/\text{KWh} &= \$/\text{KWh-In for Charging} \times \text{Compression Energy} \\
 &\quad \text{Ratio (KWh-In/KWh-Out)} \\
 &\quad + \text{Variable O\&M} \\
 &\quad + \text{Generation Heat Rate (Btu-In/KWh-Out)} \times \\
 &\quad \text{Fuel Cost (\$/Million Btu-In)}
 \end{aligned}$$

# Energy Storage Plants Fall Into Three Economically Attractive Regions

(Capital and Operational Costs Included In Below Chart)

Appendix

## Economic Attractive Regions For Storage Plants, If Have One Discharge/Day:

|                               |                                |
|-------------------------------|--------------------------------|
| Battery (Bat), Flywheel (FW): | < 2 hrs discharge              |
| Compressed Air (CAES):        | > 2 hrs and < 12 hrs discharge |
| Pumped Hydro (PH):            | > 12 hours discharge           |

### Annual Capital and Operational Cost (\$/Yr)
