Joe,

It was nice talking with you earlier this week about the CEC's process to estimate peak construction workforce information for future, large-scale energy projects in the Imperial Valley.

Here are the estimates you requested for Sempra Generation's proposed 500-MW Niland Solar project:

1. Estimated construction start and end dates: 2011 through 2015

2. Expected operational life: Power delivery begins in 2011; fully operational in 2016, with each phase operating for 30 years. Operation of this facility is expected to require no more than 4 full-time maintenance personnel.

3. Monthly estimates of total construction labor force, including month peak construction work force: Each 100-MW block will have a construction force of up to approximately 300 workers.

Please let me know if you have any questions.

Best regards,

Marilyn J. Burke
