Subject: New Verification for COC AQ-45

Dear Barbara,

I received your letter dated October 5, 2009, regarding Condition of Certification AQ-45 dealing with copies of the design details of the auxiliary boiler for the Otay Mesa Energy Center (OMEC). Since you wish to install the boiler as soon as possible and prior to November 30, 2009, we will need to change the verification to COC AQ-45, since that verification requires the submittal of boiler design criteria to the CEC 90 days prior to equipment acceptance on site. Discussions with our senior air quality staff, compliance attorney and compliance program manager resulted in concurrence with changing the verification language. The below wording will be the new verification language.

Verification: Prior to on-site use of the auxiliary boiler, the project owner shall provide copies to the CPM and the District of design details of the boiler, including any proposed post-combustion control systems.

If you have any questions or comments please do not hesitate to contact me.
