**Subject:** Re: Public Comment AGAINST BP's Hydrogen Energy CA Project

It has become increasingly clear with the extreme fall in BP stock price that the company may become insolvent. Even the President of the United States is questioning BP's ability to conduct business. I cannot fathom how the state of California could contemplate allowing BP to setup a power plant and inject high pressure CO2 into the ground in California. This project must be stopped until BP has cleaned the gulf and maintained a stable investment grade profile for a significant period.
