Oakley Generating Station (Formerly Contra Costa Generating Station) Power Plant Licensing Case

Instead of purchasing another land site for this new power station, why not use the old Contra Costa

Power Plant site units 1-3. These units are no longer used to generate power.

Also why purchase another power station site when this land could be used for another new project at a later date.

Possibly some of the facilities could be used towards building this new station, example electrical

switching station, environmental servicers on site and possibly more options.

It seems a waste of money to purchase additional land for this station when the old plant site could

be removed and used to build the new station, after all the original site was licensed to be a power station.

Besides any contamination found on the old site should be PG&E's responsibility to clean it up.
