Re: IVANPAH SOLAR ELECTRIC GENERATING SYSTEM

(Docket Number 07-AFC-5)

To whom it may concern,

I am writing as a concerned member of a science class at Saint Leo University in Florida. We studied the proposal in class, and I personally question your rationale in approving the Ivanpah Solar Electric Generating System (ISEGS) project. The project, even with the mitigation measures described in the Decision Report, will have remaining significant impacts on the environment that outweigh the benefits.

I do not agree with the Ivanpah Valley Solar Project taking over 6000 acres of land because there are too many animals that will die from this construction. There are coyotes that could possibly go extinct in the wilderness if there is construction there. In addition, especially if this project fails then all of these animals will die and be out of homes for no reason. It is not right to spend a huge amount of money on a project that has not even been proven to work. Instead of spending money on the Mojave Wilderness they can save money and put solar panels on people's homes so that the residents of California or anywhere can save money on electricity.

Sincerely yours,

Jessyca Daniel
