 Division**

PROJECT TITLE: Mariposa Energy Project

<input checked="" type="checkbox"/> Telephone	<input checked="" type="checkbox"/> Electronic	<input type="checkbox"/> Meeting Location:	
NAME:	Marcia Grefsrud Environmental Scientist Bay Delta Region State of California Department of Fish and Game	DATE: 10-11-10	TIME: 10:00 am
WITH:	Sara Keeler, Biologist		
SUBJECT:	Mitigation ratios for temporary impacts		

Phone and email communications to determine mitigation ratios for short-term temporary and long-term temporary impacts that are appropriate for the Mariposa Energy Project, based upon the project location, size, impacts, and species:

- For short-term temporary impacts: 1.1:1 mitigation ratio is required for short term temporary impacts. On-site restoration can be used to satisfy part of this requirement if the area restored is conserved and managed with an easement and endowment. If that cannot be conserved then the full mitigation would need to occur off-site.
- For long-term temporary impacts: 3:1 mitigation ratio is required for long-term temporary impacts. On-site restoration can be used to satisfy part of this requirement if the area restored is conserved and managed with an easement and endowment. If that land cannot be conserved, then the full mitigation would need to occur off-site.
