Subject: "Docket #11-IEP-1C Revised Short-Term Peak Demand Forecast"

This is a comment on the draft of the Peak Demand Forecast.

I am an engineer and will always notice rounding off errors. Table 1 lists forecast numbers for peak demand and is replete with rounding errors which are a characteristic of CEC reports with estimated numbers. The computer may show 5 digit numbers on the screen but at least the last two numbers are meaningless and reflect badly on the value of the forecast. If you wish to show meaningful numbers on the forecast round off the last two digits.

Examples

22,616 makes more sense as 22,600

22,936 " " 22,900

24,686 " 24,700
