Subject: Oakley Generating Station concern

Dear Mr. Martinez,

My name is Chris Aday. I live in a large residential neighborhood less than one mile East (down wind) from the proposed Oakley Generation Station. I am concerned that the noise study submitted by the applicants is flawed and inaccurate. The "sample microphone" for our neighborhood was placed very close to a railway crossing. I feel that the average decibel level stated in the test doesn't accurately reflect the true noise level of our neighborhood. It is in the applicants best interest to show higher levels of noise existing prior to the power plant being built. Also, the factors of prevailing winds and locally dense fog conditions were not considered. I think that negative impact that the Oakley Generating Station will have on our neighborhood would be even greater had those issues been addressed. Thank you, Chris Aday
