STAFF WORKSHOP ON PROPOSED CHANGES TO THE EMERGING RENEWABLES
PROGRAM GUIDEBOOK

INCENTIVE STRUCTURE

Our typical consumer of the 25kw wind turbine has a minimum economic interest of 19.8% of total cost invested in our base unit, *AFTER ALL INCENTIVES.* WFS

However, the majority of our clientele being in the agricultural field, will incur greater installation costs due to varied distances to/from power source.

The greatest incentive will be achieved with the rebates being paid up front.

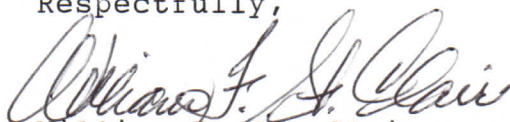

WIND RESOURCE ANALYSIS

The rebate should be based on the expected performance of the system, given the available wind resource.

ELIGIBLE EQUIPMENT LISTING

The ERP should give manufacturers at least two years in which to obtain certification.

Respectfully,

William F. St. Clair
