Chris Porter, P.E.
Power Engineer - Electric
City of Roseville
2090 Hilltop Circle
Roseville, CA 95747

**SUBJECT: ROSEVILLE ENERGY PARK, 03-AFC-1C:
APPROVAL OF REQUESTED MODIFICATION TO REMOVE
REMEDIAL ACTION SCHEME FROM SERVICE**

Dear Mr. Porter:

In accordance with the provisions of Title 20, California Code of Regulations, section 1769(a), California Energy Commission (Energy Commission) staff reviewed your petition dated March 30, 2011, requesting the removal of the remedial action scheme from service. Staff determined that the petition meets the criteria of section 1769(a)(2) and that:

- the two double circuit 60 kV generator tie-lines are capable of distributing the REP generation to the transmission system under normal and contingency conditions.
- the RAS installed previously to mitigate the line overload due to contingency is no longer needed and can be removed and that the removal will occur within the existing City of Roseville's REP 60 kV Substation.
- the modification would not trigger any downstream transmission reliability impacts to the City of Roseville or Western's transmission system
- the project does not cause any significant environmental impacts, thus CEQA analysis is not required, and
- the modification will not affect the REP projects ability to comply with all applicable LORS and therefore, the proposed Condition of Certification would remain unchanged and no new Condition would be required.

Energy Commission staff mailed the enclosed "Notice of Staff Approved Project Modifications" to the Energy Commission's post-certification project mailing list on April 26, 2011. Staff did not receive any public comments regarding this requested project change within the 14-day public review period as specified in section 1769(a)(2). Therefore, your requested modification to the Roseville Energy Park project description is approved.
