

hello hello

The Edison Team at SONGS have already made too many errors...when I hear of another mistake they have made, I shudder as "when will it be the fatal one" goes through my mind.

When we citizens of San Clemente were asked to conserve water as our water district was facing water shortage problems, we all band together with other cities and did a great job of conserving to head off major problems.

We, the users of Edison energy would no doubt do the same to conserve the 7.5 % of energy they supply us. Help Edison realize it is time for them to stop using our funds for nuclear energy at SONGS and switch to clean, sustainable alternative energy.

Help keep our people safe.

Thank you
