

## Renewable Power: Status and Issues DOCKET

11-IEP-1G

RECD. SEP 13 2011

DATE

2011 Integrated Energy Policy Report Proceeding September 14, 2011

#### Today's Agenda

• Overview of draft report

California Energy

Commission

- Panel discussion

   Valerie Winn, PG&E
   Gary Stern, SCE
   Wayne Sakarias, SDG&E
   Anthony Andreoni, CMUA
   Neil Millar, Mark Rothleder, CAISO
   Julie Fitch, CPUC
   Rich Ferguson, CEERT
- Public Comment

Carl Zichella, NRDC Jane Williams, CCAT Dan Adler, CCEF Nancy Rader, CalWEA Ed Murray, CalSEIA Steven Kelly, IEP

#### Integrated Energy Policy Report

• **Public Resources Code Section 25301**(a): "At least every two years, the commission shall conduct assessments and forecasts of all aspects of energy industry supply, production, transportation, delivery and distribution, demand, and prices. The commission shall use these assessments and forecasts to develop energy policies that conserve resources, protect the environment, ensure energy reliability, enhance the state's economy, and protect public health and safety."

#### **2011 Integrated Energy Policy Report**

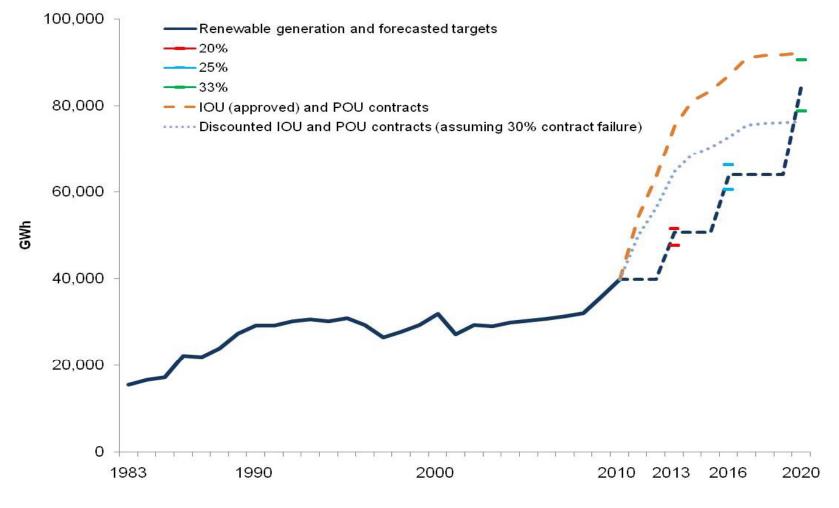

- Governor's Clean Energy Jobs Plan: CEC to prepare a "renewable energy plan...that will expedite permitting of the highest priority generation and transmission projects."
- 2011 IEPR Scoping Order: Develop strategic plan for renewable development.
  - "Renewable Power: Status and Issues" report will be foundation for strategic plan

#### **Renewable Energy Goals**

- Renewable generation to equal:
  - Average of 20% of retail sales during compliance period ending December 31, 2013
  - o 25% by December 31, 2016
  - o 33% by December 31, 2020
- 20,000 MW of new renewable capacity by 2020
  - 8,000 MW utility-scale renewables
  - o 12,000 MW of renewable DG

#### **Progress Toward Goals**

- Renewable generation 15.7% of statewide retail sales in 2010
- 9,435 MW of renewable capacity permitted in 2010
- 3,278 MW of installed renewable DG capacity
- As of May 2011, enough renewable generation on-line or contracted to meet estimates of renewable energy needed to achieve 33% by 2020 target.

#### Regional Targets for 12,000 MW of Renewable DG

California Energy

Commission

| Region                        | Behind the Meter<br>(all technologies) | Wholesale | Undefined (mix of<br>behind the meter<br>and wholesale) | Total  |
|-------------------------------|--|-----------|---|--------|
| Central Coast                 | 280                                    | 90        | 0   | 370    |
| Central Valley                | 830                                    | 1590      | 0   | 2,420  |
| East Bay                      | 420                                    | 30        | 0   | 450    |
| Imperial                      | 50                                     | 90        | 0   | 140    |
| Inland Empire                 | 480                                    | 430       | 0   | 910    |
| Los Angeles, *city and county | 970                                    | 860       | 2170  | 4,000  |
| North Bay                     | 220                                    | 0         | 0   | 220    |
| North Valley                  | 120                                    | 50        | 0   | 170    |
| Sacramento Region             | 410                                    | 170       | 220   | 800    |
| San Diego                     | 500                                    | 50        | 630   | 1,180  |
| SF Peninsula                  | 480                                    | 10        | 310   | 800    |
| Sierras                       | 30                                     | 40        | 0   | 70     |
| Orange                        | 420                                    | 10        | 40  | 470    |
| Total                         | 5,210                                  | 3,420     | 3,370   | 12,000 |

#### Regional Targets for 8,000 MW of Utility-Scale Renewables

| ldentified<br>Transmission<br>Line (s)                                 | CREZ Served   | Capacity with<br>New/Upgraded<br>Lines (MW) | Project Capacity<br>Permitted in 2010<br>Associated with the<br>New/Upgrades (MW) | Additional Project<br>Capacity for 8,000 MW<br>of New Large-Scale<br>Renewables (MW) |
|--|---|---|---|--|
| Sunrise<br>Powerlink   | Im perial North<br>and South, San<br>Diego South    | 1,700                                       | 760   | 940  |
| Tehachapi and<br>Barren Ridge  | Tehachapi,<br>Fairmont                              | 5,500                                       | 2,810   | 2,690  |
| Colorado River,<br>West of Devers,<br>and Path 42<br>Upgrade           | Riverside East,<br>Palm Springs,<br>Imperial Valley | 4,700                                       | 1,825   | 2,875  |
| Eldorado-<br>Ivanpah,<br>Pisgah-Lugo,<br>and Coolwater-<br>Jasper-Lugo | Mountain Pass,<br>Pisgah, Kramer                    | 2,450                                       | 1,470   | 980  |
| Borden-Gregg   | Westlands   | 800   | 145   | 655  |
| South of Contra<br>Costa   | S o la n o  | 535   | 155   | 380  |
| Carrizo-Midway   | Carrizo South,<br>Santa Barbara                     | 900   | 800   | 1 00   |
| TOTAL  | 8,620   |   |   |  |

#### **Post-2020 Renewable Investments**

- 33% by 2020 considered floor goal
- Additional renewable generation could be needed to:
  - Meet increased demand from high EV penetration
  - Replace generation from retiring coal plants
  - Provide zero-emission generation to meet 2050
     GHG emission reduction goals
- Could need from 67-79 percent renewables by 2050

#### **Increased Interest in Renewables**

- 2009 RPS Solicitation enough generation bid in to meet half of IOU load in 2020
- Signed contracts for 9,300-10,500 MW new capacity
- 9,435 MW permitted in 2010; additional 26,000 MW in permitting process
- 57,000 MW in CAISO Interconnection Queue
- 5,200 MW in Wholesale Distribution Access Tariff queue

#### **Renewable Technical Potential**

California Energy

Commission

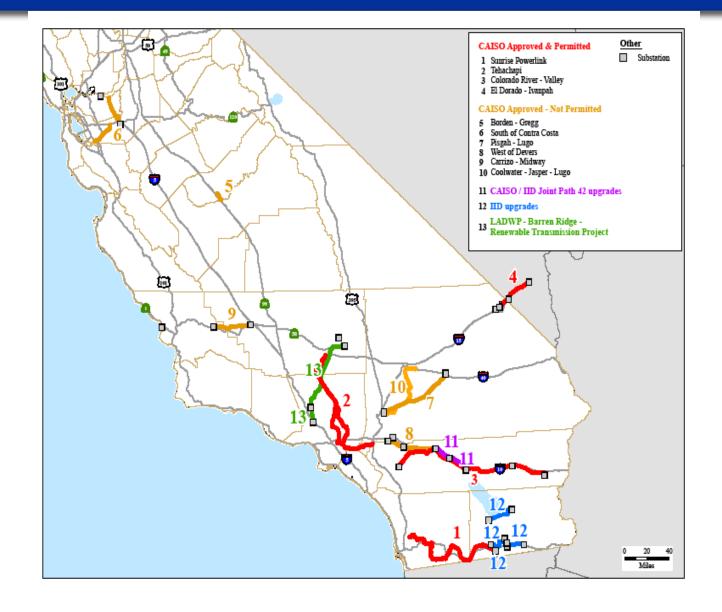

| Technology                | Technical Potential (MW) |
|---------------------------|--------------------------|
| Biomass                   | 3,820                    |
| Geothermal                | 4,825                    |
| Small Hydro               | 2,158                    |
| Solar                     |                          |
| Concentrating Solar Power | 1,061,362                |
| PV                        | 17,000,000               |
| Wave and Tidal            | 32,763                   |
| Wind                      |                          |
| On-shore                  | 34,000                   |
| Off-shore                 | 75,400                   |
| TOTAL TECHNICAL POTENTIAL | 18,214,328               |

#### **Permitting/Environmental Issues**

- Environmental/Land Use Issues
  - Impacts on sensitive plant/animal species
  - o Water issues
  - Cultural resources
  - Land use concerns
- Permitting Process Issues
  - Fragmented and overlapping processes
  - Varying codes, standards, fees for DG projects

#### **Transmission Issues**

- Interconnection of ARRA-funded renewable projects
- Need for coordinated land use/transmission planning
- Optimize use of existing grid and rights-ofway

#### Transmission Projects Licensed or Under Construction

- SDG&E Sunrise Powerlink
- SCE Tehachapi Renewable Transmission Project
- SCE Colorado River Valley transmission line (ARRA)
- SCE El Dorado-Ivanpah Upgrade (ARRA)
- Imperial Irrigation District upgrades
- LADWP Barren Ridge Renewable Transmission Project (ARRA)

#### Transmission Projects without Active Licensing Applications

- PG&E Borden Gregg 230 kV reconductoring
- PG&E South of Contra Costa reconductoring
- SCE Pisgah Lugo 500 kV upgrade (ARRA)
- SCE West of Devers upgrades (ARRA)
- PG&E Carrizo Midway 230 kV reconductoring
- SCE Coolwater Jasper Lugo 230 kV line (ARRA)
- California ISO/IID Joint Path 42 upgrades

#### Need for Coordinated Land Use/ Transmission Planning

- Transmission planning and utility project development processes essentially sequential
- Transmission planning, consideration of routing issues, and construction of project can each take as much as 2 years.

#### **Use of Existing Transmission Grid**

- Emphasizing existing line upgrades and use of existing rights-of-way reduces environmental concerns
- Allowing upsizing of projects beyond current need could provide unused capacity for future use
- R&D needed to identify technologies to improve performance of existing grid

#### **Grid-Level Integration Issues**

- Need for regulation, ramping, spinning reserves, replacement power.
- Need to address potential overgeneration issues and improve forecasting of intermittent resources
- Use complementary technologies (natural gas plants, energy storage, demand response) to provide integration services

#### **Distribution-Level Integration**

- Modernize aging distribution system
- Develop smart grid technologies to facilitate two-way flow of electricity
- Develop better protection systems, standards, and cyber security
- Improve interconnection processes to reduce time and cost of interconnection

#### **Investment/Financing Issues**

- Overall reduced investment in energy R&D
- Private companies unwilling to invest in innovation without guarantee of returns

California Energy

Commission

- Funding gaps at R&D and early commercial stages
- Recession affecting developer ability to use traditional financing tools

#### **Cost Issues**

- Seeing rapid cost reductions in solar technologies
- Both utility-scale and DG solar coming in below CPUC's MPR
- Cost challenges include environmental review and permitting, project construction, and interconnection
- Need to consider portfolio value of renewables

#### **Cross-Cutting Issues**

- R&D to develop technologies to integrate renewables and bring costs down
- EJ concerns
- State and local government coordination
- Adequate and well-trained workforce
- Renewables on state properties

#### **Panel Discussion - Morning**

- Valerie Winn, PG&E
- Gary Stern, SCE
- Wayne Sakarias, SDG&E
- Anthony Andreoni, CMUA

## LUNCH

## Workshop will resume at 1:00

#### Panel Discussion (cont'd)

- Neil Millar and Mark Rothleder, CAISO
- Julie Fitch, CPUC
- Rich Ferguson, CEERT
- Carl Zichella, NRDC
- Jane Williams, CCAT

### BREAK will reconvene at 2:55

#### Panel Discussion (cont'd)

- Dan Adler, CCEF
- Nancy Rader, CalWEA
- Ed Murray, CalSEIA
- Steven Kelly, IEP

# **PUBLIC COMMENT**

#### **Next Steps**

- Written comments due COB October 5
- Instructions for submitting written comments available under the September 14 heading at:

#### www.energy.ca.gov/2011\_energypolicy /notices/
