**Subject: HIDDEN HILLS SOLAR ELECTRICAL GENERATING SYSTEM, REVISED DATA ADEQUACY RECOMMENDATION (11-AFC-2)**

On August 5, 2011, Hidden Hills Solar Holdings, LLC, submitted an Application for Certification (AFC) to construct and operate the Hidden Hills Solar Electric Generating System (HHSEGS). HHSEGS will be located on approximately 3,277 acres of privately owned land leased in Inyo County, California, immediately adjacent to the Nevada border. The project site is approximately 18 miles south of Pahrump, Nevada, and approximately 45 miles west of Las Vegas, Nevada.

Staff's September 2, 2011 initial review of Hidden Hills Solar Holdings, LLC's AFC determined that it did not meet all the requirements listed in Title 20, section 1704, and Division 2, Chapter 5, Appendix B of the California Code of Regulations for the 12-month process. Specifically, the AFC was deficient in nine of 22 technical areas: air quality, biological resources, cultural resources, efficiency, land use, traffic and transportation, transmission system design, visual resources and water. At the September 7, 2011 Business Meeting, the Energy Commission accepted staff's initial data adequacy recommendation.

On September 9, 2011, Hidden Hills Solar Holdings LLC filed their AFC Supplement. On September 23, 2011, Supplement B provided greater biological resources and cultural resources information and details. Staff has reviewed the Supplemental information, and believes the AFC now meets the regulatory requirements in all nine of the previously deficient technical disciplines. Attached are summary table and data adequacy worksheets for the nine technical disciplines reflecting that the Supplemental information submitted by the applicant achieves data adequacy. At the Energy Commission's Business Meeting on October 5, 2011, I will recommend that the Energy Commission accept the Hidden Hills Solar Electric Generating System AFC, with the supplemental information, as complete and request that a Committee be appointed. If you have any questions, please call Mike Monasmith, Staff's Project Manager, at (916) 654-4894.

Appendix B (g) (6) (E)	Provide the cooling tower and heat recovery steam generator (HRSG) exhaust design parameters that affect <u>visible plume formation</u> . For the cooling tower, data shall include heat rejection rate, exhaust temperature, exhaust mass flow rate, liquid to gas mass flow ratio, and, if the tower is plume-abated, moisture content (percent by weight) or plume-abated fogging curve(s). The parameters shall account for a range of ambient conditions (temperature and relative humidity) and proposed operating scenarios, such as duct firing and shutting down individual cells. For the heat recovery steam generator exhausts, data shall include moisture content (percent by weight), exhaust mass flow rate, and exhaust temperature. The parameters must correspond to full-load operating conditions at specified ambient conditions, and shall account for proposed operating scenarios, such as power augmentation (i.e., evaporative coolers, inlet foggers, or steam injection) and duct firing, or proposed HRSG visible plume abatement, such as the use of an economizer bypass. For simple-cycle projects, provide analogous data for the exhaust stack(s).	Section 5.13.4.2.2, p. 5.13-22.	Yes
