Re:Pio Pico Energy Center Project (11-AFC-01) Air Quality Modeling Submitted to the San Diego Air Pollution Control District

Dear Mr. Solorio:

On behalf of Applicant Pio Pico Energy Center, LLC, please find enclosed herein additional air quality modeling completed for the Pio Pico Energy Center Project (the Project).

Very truly yours,

Melissa A. Foster

Re: Modeling for Pio Pico Energy Center using CY 2008-2010 Data Application No. ADCP-2010-APP-001251

Dear Mr. Moore:

On behalf of Apex Power Group, LLC (Apex), Sierra Research is providing additional information regarding the application for the Pio Pico Energy Center (PPEC), to be located in Otay Mesa, California. This project is subject to Certification by the California Energy Commission.

Modeling Results_CY 2008_2010 Data

The applicant has performed modeling to support a compliance demonstration based on CY2008-2010 data. This compliance demonstration was performed in order to demonstrate that the project will not cause or contribute to new exceedances of state or federal ambient air quality standards. The new modeling covers all pollutants and averaging times for which state or federal ambient air quality standards have been promulgated.

The attached document provides tables and text summarizing the new modeling and the results.

A CD containing electronic versions of all modeling files has also been provided.

1801 J Street Sacramento, CA 95811 Tel: (916) 444-6666 Fax: (916) 444-8373 Ann Arbor, MI Tel: (734) 761-6666 Fax: (734) 761-6755 Steve Moore

Please do not hesitate to call me if you have any questions,

Sincerely Steve-Hill

5.2.4 Environmental Consequences

5.2.4.14 Commissioning Impacts

TABLE 5.2-26 MODELED MAXIMUM IMPACTS DURING COMMISSIONING (2008-2010 METEOROLOGICAL DATA) (REVISED 10/19/11)

	<u> </u>	Maximum	Background	Total		
	Averaging	Predicted	Concentration	Concentration'	NAAQS	CAAQS
Pollutant	Period	<u>Impact (Ng/m³)</u>	<u>(N9/m³)</u>	<u>(pg1m³)</u>	(<u>1¹9¹r</u> ¹³)	<u>(P9Im³)</u>
NO2	1-hr	194	135	329	188	339
NOZ	Annual		<u>30</u>	<u></u>	NA	NA
	1-hr	3	29	32	196	655
000	3-hr	1	18	19	1300	
SO2	24-hr	0	10	10		105
	<u>Annual</u>		<u>5</u>	=	NA	
<u> </u>	1-hr	375	5	380	40,000	23,000
CO	<u>8_hr</u>	<u>90</u>	2	<u>92</u>	<u>10,000</u>	<u>20.000</u>
DM:	24-hr	2	58	60	150	50
PMio	<u>Annual</u>		<u>26.7</u>			NA
	24-hr	2.2	43.7	45.9	35	
PM2.5	<u>Annual</u>		12.3		NA	<u>NA</u>

' The total concentration shown in this table is the sum of the maximum predicted impact and the maximum measured background concentration. Because the maximum impact will not occur at the same time as the maximum background concentration, the actual maximum combined impact will be lower.

Table 5.2-26 shows that commissioning emissions will not cause new exceedances of any state or federal air quality standards, with the exception of the federal 1-hour NO2 standards. (Because commissioning is a temporary activity lasting a few weeks at most, the annual standards are not applicable. Commissioning emissions will count toward the limit on annual emissions for the first year of normal operations, so the analysis of annual impacts in Section 5.2.4.15 is applicable to commissioning.)The table shows that worst-case background concentrations of PK° are already above the state standard, although they are below the federal standard. The project's 24-hour PK° impacts are lower than the federal significance threshold of 5 .tg/m³(see Table 5.2-11). The table indicates that commissioning activities may contribute to existing exceedances of the federal 24-hour average PM2.5 standard; however, this standard is evaluated based on the three-year average of the 98th percentile concentration and commissioning emissions, as a short-term activity, are not likely to contribute significantly to an exceedance in fact.

Table 5.2.26 indicates that the sum of the worst-case commissioning NO2 impacts and the worstcase ambient background concentration is greater than the federal **1-hour NO2** standard. However, this does not mean that the project would result in a violation of that standard. This is because compliance with the federal standard is based on the 3-year average of the 98th

percentile of daily maximum 1-hour average concentrations. Because the federal one-hour NO2 standard requires averaging the concentrations over three years, the NO₂impacts during the single year of commissioning would not be likely to cause a new violation of the federal one-hour NO2 standard.

The project's commissioning emissions will not result in potentially significant air quality impacts. Nevertheless, the emission offsets required for operating emissions will be provided before commissioning begins, further mitigating commissioning impacts.

Federal 24-hour PM2.5	<u>2.2 (normal)</u>	<u>43.7</u> 45,7 ²	<u>Not Available¹</u>	<u>35</u>
Federal 24-hour PM2.5	2.6 (normal) ²	45,7 ²	25,9 ²	35

¹ 2008-2010 PM2.5 measurements are only taken every three days. Data substitution to fill missing data was not performed by District 2006-2008 analysis is shown instead.

² Based on 2006.2008 data.

Demonstration of Compliance with District Regulation 20-3(d)(2)(i)

Regulation 20-3(d)(2)(i)(A) requires a demonstration that the project will not cause a violation of a state or national ambient air quality standard that does not already exceed the standard. Table 5.2-28 makes this demonstration for all of the applicable air quality standards (all standards except the state 24-hour PK₀) standard, the state annual P1\4₁₀standard, and the state annual PM2 5 standard).

Regulation 20-3(d)(2)(i)(c) requires a demonstration that the project will not cause additional violations of a state ambient air quality standard. The project cannot cause new violations of the annual standard because the annual standard is already exceeded. No new violations are possible.

The demonstration that the project will not result in new violations of the 24-hour PMio standard is presented in Table 5.2-30A. All ambient measurements at the Chula Vista monitoring station (CY 2008-2010) greater than 46 μ s/m³ are listed; the sum of the ambient measurement and the worst-case project impact is determined, and compared to the standard of 50 μ g/m³. Additionally, the District has provided monitoring data for 2010 from a relatively new PK₀ monitor located at the Donovan correctional facility. The sum of ambient measurements and the modeled maximum project impact for each day is also presented in Table 5.2-30A

TABLE 5.2-30A DEMONSTRATION THAT PROJECT WILL NOT CAUSE NEW VIOLATION OF STATE 24-HOUR PMio STANDARD (50 pg/m³) (2008-2010 METEOROLOGICAL DATA)
