Workshop on
Combined Heat and Power in California***

February 16, 2012

The amount of installed CHP needed to meet the CARB scoping plan's GHG targets is highly dependent on CHP performance characteristics

MW needed to meet statewide GHG targets (6.7 MMT¹ CO₂ reductions) by electrical and thermal efficiency^{2,3}

¹ MMT = Million Metric Tons

² Assumes 90% capacity factor

³ All presented projects meet the double-benchmark standard
