

Petition to Stop the Mission Trails Power Plant
 aka The Quail Brush Power Generation Project, aka Santee Power Plant
 Addressed to: California Energy Commission & All Agencies

We, the undersigned, petition the California Energy Commission and all agencies, to categorically reject any proposals by Cogentrix Energy, Goldman Sachs and SEMPRA Energy to construct the Quail Brush Power Plant alongside Mission Trails Regional Park. We are very concerned about the quality of life, health and safety impact upon people who live near Mission Trails and visitors from all over the world. This power plant will negatively impact anyone who lives, works or attends school nearby, and anyone who frequents the park. It will also negatively affect the local wildlife, including many endangered species. The tranquility of our open-space park, which is not only a local but national treasure, with historical and geographic features comparable to those of Yosemite, will be adversely affected and property values will decrease as noise and air pollution rise.

We feel this project is a very poor idea and should be categorically rejected. As we are now well under way into the 21st Century, Californians are enthusiastic to participate in clean energy alternatives such as solar, wind and wave harnessing, etc. To construct a power plant anywhere near Mission Trails, one of the nation's largest urban park settings and a national treasure, which has long been designated as Open Space, and not an Industrial area, is irrational and unnecessary.
