AUG 13 2012

Aug 12, 2012

California Energy Commission  
CA

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Ms. Linda Jones  
1349 Hollowell St  
Ontario, CA 91762-2807

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Mr. Michael Brazil  
15304 Clover Valley Rd  
Grass Valley, CA 95949-7020

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POU's comply with the state's vitally important renewable energy standard.

Sincerely,

Mr. Jay Rice  
72 Holstrom Cir

California Energy Commission  
CA

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POU's comply with the state's vitally important renewable energy standard.

Sincerely,

Dear Energy Commission,

I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

Some utilities are on track to reaching the 2020 goals. While others are well behind. The California Energy Commission needs to keep utilities on track by holding them accountable to make progress between compliance periods and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020. If corporation know that can drag their feet with no consequences so. Their priority is profit not clean energy. California's need your agency to keep utilities going in the right direction.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POU's comply with the state's vitally important renewable energy standard.

California Energy Commission  
CA

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Ms. Elena Myers  
1060 Mississippi St  
San Francisco, CA 94107-3410

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POU's comply with the state's vitally important renewable energy standard.

Sincerely,

Ms. Victoria Plummer  
4225 Solano Ave  
Napa, CA 94558-1611

The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Mr. Peter Cameron  
1227 W 35th St  
Los Angeles, CA 90007-3446

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

California Energy Commission  
CA

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POU's comply with the state's vitally important renewable energy standard.

Sincerely,

Ms. Cathy O'Neill  
244 16th St  
Santa Monica, CA 90402-2216

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Mrs. Shirley Harris  
3502 Primrose Dr  
Willits, CA 95490-8536

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Mr. Ming Choi  
571 6th Ave

Dear Energy Commission,

I urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

California Energy Commission  
CA

Dear Energy Commission,

Thank you for your leadership in keeping California at the forefront of clean energy policy. I am writing to urge you to establish a strong and transparent renewable energy program for the state's publicly owned utilities (POUs).

According to a new report by the Union of Concerned Scientists, some utilities are well on their way towards reaching the 2020 goals, while others have a lot to do to catch up. The California Energy Commission can help keep utilities on track by holding them accountable to make progress between compliance periods, and take actions to reduce perceived hurdles to reaching 33 percent renewables by 2020.

Specifically, the commission should specify how the utilities will make "reasonable progress" in their efforts to gradually increase their use of renewable energy between now and 2020, rather than being allowed to wait and then attempt to buy all their renewable power at the last minute. They can submit this kind of information in the annual reports that state law requires the utilities to file with the commission.

Thanks again for your leadership. Regarding Docket Number 11-RPS-01, please do all you can to ensure there is strong oversight in how California's POUs comply with the state's vitally important renewable energy standard.

Sincerely,

Miss Suzy Chersky  
18030 Brookhurst St PMB 410  
Fountain Valley, CA 92708-6756
