

Public Comment regarding the proposed Quail Brush Generation Project

I would like to make the following written comment. I understand that my comments will be docketed and may be posted on the Energy Commission's website and be available to the public.

With regards to looking for
some classes of
nutrients, microbes do not need
nutrients (e.g., carbohydrates, proteins),
they require chemicals like nitrogen;
of ten times this is found as fertilizer
 NH_3 , but some can reduce nitrogen (N_2)
or nitrous oxide and carbon sources (CO_2)
to make their own nutrients in the
process of photosynthesis and nitrogen
reduction... hence algal blooms.
