Subject: Comments on Docket No. 14-IEP-1F: Trends in Sources of Crude Oil

California Energy Commission

DOCKETED

14-IEP-1F

TN 73336

JUL 09 2014

As a resident of Kern County, I am writing to urge increased regulatory oversight on the transportation and use of crude oil in California. The rail cars going through Bakersfield now are too numerous; we don't want anymore!

Specifically I am asking the CEC to:

1) Phase out DOT 111 tank cars.

DOT-112 tank cars and DOT-114 tank cars have been required since 1979 under Regulation SOR/79-101 of the Canada Transportation Act for the transportation of gases such as propane, butane, or vinyl chloride. Transportation Safety Board of Canada Railway Investigation Report R94T0029 section 1.13.1 documents DOT-112 tank car and DOT-114 tank car standards: the DOT-111 tank "cars are not considered to provide the same degree of derailment protection against loss of product as the classification 112 and 114 cars, designed to carry flammable gases."

2) Classify Tar sands oil and Bakken Crude as hazardous.

Thank you.
