Pre Rulemaking Workshop  
Hearing Room A  
November 3, 2014

## Changes to Section 141.0

- Added a preamble at the start of the Section
- Added new language for electric power distribution systems and demand responsive controls
- Simplified Lighting System Alteration language
- Made minor edits for clarity

## Added New Language

- Preamble describes an overall framework for Section 141.0, and may allow us to further simplify the Section.
- “Electrical power distribution system” added to 141.0(a) and (b), reflecting the language in Section 130.5.
- Section 141(b)2.P. also specifies when the demand responsive controls specified in 130.1(e) and 130.5(e) are required for alterations.

# Simplified Lighting System Alteration Language

- Simplified and streamlined the language for lighting system alterations and lighting wiring alterations
- Removed the need for the term “luminaire modification in place”, and the complex interactions between exceptions.
- Combined tables 141.0-E and F into one table
- Change is intended to be non-substantive

## Minor clarifying edits

- Removed parenthetical language from 141.0(b)E
- Combined 141.0(b)K and L (alterations to signs) into a single item: L was effectively an exception to K, and is now stated as such
- Simplified language in 141.1: instead of listing individual processes with the same requirement, now simply states that covered processes must meet Section 120.6.
