

Attention: Docket No. 15-BSTD-01

To whom it may concern:

Lumenature is an electrical contractor operating in Santa Cruz, San Benito, San Mateo, and Monterey counties. We specialize in providing energy efficient lighting modifications to existing lighting of PG&E customers to help reduce the energy load on California's energy grid.

Lumenature wholeheartedly supports the proposed changes that are outlined in the 45-Day Language for 2016 Title 24 Part 6. The proposed language is reasonable and consistent and is a huge improvement over the 2013 Code which has made customers reluctant to install energy efficient lighting because of the burden and expense of the code requirements. Since its inception on July 1st, 2013, our work load has dropped significantly because many potential customers were unwilling to comply with 2013 Title 24.

Given that the focus of energy efficiency retrofit projects is the installation of new luminaires or modifications to luminaires resulting in lower power consumption, these proposed modifications will effectively allow energy efficiency providers to once again comprehensively address commercial projects of all sizes.

We urge the CEC to make said modifications retroactive to January 1st, 2015.

On behalf of Lumenature and all its employees, thank you for taking the time to consider our input regarding the proposed modifications.

Sincerely,

Mark Pursell, President.

Jose Santillan, Operations Manager
