Subject: Docket No. 15-BSTD- 01

California Energy Commission

DOCKETED

15-BSTD-01

TN # 74849

FEB 27 2015

Re: Docket No. 15-BSTD-01

Title 24 changes implemented July 1, 2014 are not having the desired effect; California is saving less energy, and losing irreplaceable industry experts who have been forced from the field. This was a predictable outcome, owing to project-killing added costs and complexity that was in no one's interest.

Therefore, I support the following language alterations, which provide exemptions from code compliance in the case of:

Replacement of luminaires where the new luminaires have lower power consumption compared to the original luminaires."

And:

Replacement of luminaire components where the modified luminaires have lower power consumption compared to the original luminaires.

I also oppose the proposed changes in Section K, regarding wiring alterations.

I commend you for recognizing that these changes must be made; however, *it is critical that you do not wait until January 1, 2017, but rather, implement the revisions as soon as possible.* Our energy saving efforts must not be put on hold that much longer.

Thank you for your consideration,

Robert Ofsevit

Vice-President
