Re: Docket # 15-BSTD-01 Proposed Revisions to 2016 Joint Appendices
Color Temperature for residential LEDs.

Dear CEC,

I'm writing to express my concern and disagreement with the above proposed requirement for CCT of 3000 Kelvin or less for residences in California. I don't see energy savings advantages in this requirement, nor do I think the color temperature in someone's home should be dictated. Although I use 3000K or less in most of the residences I design, it should not be a requirement. There are people who prefer, and certain tasks that are performed better under higher color temperatures. In one residence I designed, the Owner, a professional painter, wanted a higher color temperature for her art.

I respectfully request that you remove this requirement from the code.

Sincerely,

Patricia Glasow
