DOCKETED

15-BSTD-01

TN # 75769

MAY 15 2015

Good Afternoon,

I have reviewed draft language in Appendix JA8-2 regarding the efficacy certification testing for light bulbs and have a question. If the regulations are adopted as drafted, will Energy Star certified light bulbs demonstrate conformance to the proposed testing? I think that it would be convenient for the public and save inspection staff time if Energy Star would be suitable proof of meeting the efficacy requirements for light sources.

Can language be added to Appendix JA8-2 to include Energy Star rating for demonstration of conformance to the efficacy requirements?

Regards,
