## **Promote Nuclear Power**

This is a citizens comment directed to the CEC Commisioners work shop on May 11. Docket 15 IERP 06. The CEC must bite the bullet and promote nuclear power instead of continuing the dog and pony shows of work shops devoted to studying whether nuclear power should be abolished in the state.

The first job of the forthcoming meeting on "renewable power" is to advise Governor Brown and the legislature that the only way to achieve the proposed reductions in greenhouse gas in CA is to build several new nuclear power plants to replace fossil plants. As a first step nuclear energy should be on the "renewable" list.

The state can be fully paved with expensive wind and solar power plants but they never can supply the 24/7 power that nuclear power plants can provide. All citizens wish to be able to flip their electric switches .24/7 and be supplied with reasonably priced power..

The Sierra Club et all can pontificate all they wish but they cannot solve the problem of expensive non 24/7 power sources trying to serve the people.

If you are worried about the spent fuel "problem" inform our federal representatives to get the government to reactivate the fast reactor program which is only sane way to eliminate the spent fuel "problem"

Frank Brandt, private citizen  
San Jose, CA
