Support to continued operation of Diablo Canyon

Diablo has been a huge clean generation asset for all Californian's in the past many years and continues to generate in a safe and reliable manner. The seismic analyses have been updated and are constantly being reviewed to the latest requirements by experts internal and external from PG&E. The NRC oversees the process in applying the regulations and standards to ensure, with a high degree of confidence, that Diablo meets all requirements. We need this generation source to balance the intermittent nature of wind and solar and the uncertainty of cost changes in natural gas in the coming years. It is critical to maintain this resource --- otherwise, we will need to import more and more electricity from out of state and someday may be reassigned to their state's energy requirements and leave CA without sufficient electricity for our citizen's.
