## ABSTRACT

This *Renewables Portfolio Standard 2011-2013 Procurement Verification Lead Commissioner Report* presents the California Energy Commission staff's findings on the amount of renewable energy procured by retail sellers of electricity under California's Renewables Portfolio Standard. The report presents findings for 21 retail sellers, which include investor-owned utilities (small, large, and multijurisdictional utilities), electric service providers, and community choice aggregators.

**Keywords:** Renewables Portfolio Standard, RPS, Renewable Energy Credits, RECs, renewable attributes, annual procurement target, certification, verification, generation, investor-owned utilities, electric service providers, multijurisdictional utilities, community choice aggregators, Western Renewable Energy Generation Information System, WREGIS

# EXECUTIVE SUMMARY

## Background

California's Renewables Portfolio Standard, enacted in 2002, required retail sellers of electricity to increase their procurement of eligible renewable energy resources by at least 1 percent per year so that 20 percent of their retail sales were procured from eligible renewable energy resources by 2017. Subsequent changes to law first accelerated the 20 percent goal to 2010, then added an increased goal of 33 percent by 2020, and broadened the scope of the Renewables Portfolio Standard to include local publicly owned electric utilities starting in 2011. Most recently, the passage of Senate Bill 350 (De León, Chapter 547, Statutes of 2015) raises the Renewables Portfolio Standard to 50 percent by 2030.

The California Energy Commission and the California Public Utilities Commission jointly implement the Renewables Portfolio Standard program. The Energy Commission certifies eligible renewable energy resources under the Renewables Portfolio Standard and verifies the procurement claims of retail sellers for the California Public Utilities Commission to use when determining retail sellers' compliance with the Renewables Portfolio Standard. Energy Commission staff does not evaluate retail sellers' progress in meeting Renewables Portfolio Standard procurement obligations.

The Energy Commission's verification reports are not legally mandated but are prepared as a critical part of the Energy Commission's Renewables Portfolio Standard responsibilities. After the Energy Commission adopts and finalizes the verification reports for retail sellers, they are transmitted to the California Public Utilities Commission.

Covering Compliance Period 1 (2011-2013), this report:

- Verifies the Renewables Portfolio Standard eligibility of the renewable energy facilities from which each reporting retail seller is claiming procurement.
- Verifies, to the extent possible, that the amount of renewable electricity procurement claimed by each retail seller was sufficiently generated by each eligible facility.
- Determines the amount of renewable electricity that may be attributed to multifuel facilities, including facilities using biomethane, by comparing the renewable and nonrenewable fuel usage amounts with the amount of allowable nonrenewable fuel usage per eligible facility.
- Verifies, to the extent possible, that procurement exclusively serves California's Renewables Portfolio Standard and is not double-counted for another renewable energy regulatory or market program.
- Identifies eligible, ineligible, pending, and withdrawn procurement claims for each retail seller and provides the total amount of eligible procurement.
- Provides eligible procurement claims by resource type.

- Discusses the limitations of the Energy Commission's Interim Tracking System, established before the development of the Western Renewable Energy Generation Information System. The system is now used to track renewable energy procurement in 14 western states, two Canadian provinces, and northern Baja California in Mexico.

## **Report Overview**

This report applies only to retail sellers, which include investor-owned utilities (large, small, and multijurisdictional), electric service providers, and community choice aggregators reporting for 2011 through 2013. A total of 21 retail sellers reported procurement during this period. Starting with reporting year 2011, in accordance with Senate Bill X1-2 (Simitian, Chapter 1, Statutes of 2011, First Extraordinary Session), Energy Commission staff began verifying renewable energy procurement claims by local publicly owned electric utilities to determine Renewables Portfolio Standard compliance. Energy Commission staff will prepare a separate verification and compliance report specifically for local publicly owned electric utilities.

In this report, staff verified nearly 460 claims for 2011, more than 470 claims for 2012, and 1,465 claims for 2013. Outstanding issues were resolved with supporting documentation, and retail sellers correcting their reports and refiled the claims when necessary. During the verification process, claims were verified from facilities using pipeline biomethane, and one multifuel issue was identified and resolved, which occurred because a facility's nonrenewable fuel use exceeded the allowable amount of nonrenewable fuel use for the total RPS claim to be counted as RPS eligible. Additionally, staff identified and resolved 66 overclaim issues that were due to the facilities' annual RPS claims exceeding the facilities' annual generation.

After verification reports are transmitted to the California Public Utilities Commission, the Energy Commission may correct previous verification report results if revisions are required.

## **Conclusions**

The procurement claims in this report were from Renewables Portfolio Standard-certified facilities with sufficient generation to cover the procurement amounts claimed with two exceptions. Liberty Power Holdings has ineligible Renewables Portfolio Standard claims due to the generation occurring prior to the eligibility dates of the facilities. Southern California Edison also has ineligible claims because the generation was not tracked in Western Renewable Energy Generation Information System. The Energy Commission finds that the procurement claim amounts listed in this report are eligible for the Renewables Portfolio Standard and should count toward meeting the retail sellers' Renewables Portfolio Standard obligations, if consistent with Renewables Portfolio Standard procurement and compliance rules.

# CHAPTER 1: Introduction

---

## Overview of the Renewables Portfolio Standard and Verification

This *Renewables Portfolio Standard 2011-2013 Retail Sellers Procurement Verification Lead Commissioner Report (2011-2013 Verification Report)* presents the California Energy Commission's findings on the amount of renewable energy procured by retail sellers of electricity under California's Renewables Portfolio Standard (RPS).

California's RPS program was established in 2002 by Senate Bill (SB) 1078 (Sher, Chapter 516, Statutes of 2002) with the goal of increasing the percentage of renewable energy in the state's electricity mix to 20 percent of retail sales by 2017. The RPS statute emphasizes the importance of increasing the diversity, reliability, public health, and environmental benefits of the state's energy mix. The Energy Commission's *2003 Integrated Energy Policy Report (IEPR)* recommended accelerating the RPS goal to 20 percent by 2010, and the *2004 IEPR Update* further recommended increasing the target to 33 percent by 2020. The state's *Energy Action Plan* supported this goal.<sup>1</sup>

In 2006, SB 107 (Simitian and Perata, Chapter 464, Statutes of 2006) codified California's 20 percent by 2010 RPS goal. The legislation required retail sellers of electricity, including electric corporations,<sup>2</sup> electric service providers (ESP), and community choice aggregators (CCA), to increase renewable energy purchases by at least 1 percent per year with a target of 20 percent renewables by 2010. To broaden the scope of the RPS to include local publicly owned electric utilities<sup>3</sup> and to codify the ambitious 33 percent by 2020 goal, Governor Edmund G. Brown, Jr. signed Senate Bill X1-2 (Simitian, Chapter 1, Statutes of 2011, First Extraordinary Session) in April 2011. More recently, the passage of SB 350 (De León, Chapter 547, Statutes of 2015) raises the RPS to 50 percent by 2030.

Under the RPS statute, the Energy Commission is charged with certifying renewable energy resources as eligible for California's RPS and developing an accounting system to verify compliance with the RPS. The Energy Commission's *Renewables Portfolio Standard Eligibility Guidebook (RPS Eligibility Guidebook)* specifies the criteria and process for certifying generating facilities as eligible for the RPS. The eligibility criteria include facility qualifications by technology, size, resource type, and initial commercial operation date. The *RPS Eligibility Guidebook* now includes reporting and verification requirements under SB X1-2.<sup>4</sup>

1 California Energy Commission, [http://www.energy.ca.gov/energy\\_action\\_plan/index.html](http://www.energy.ca.gov/energy_action_plan/index.html).

2 Also referred to as *investor-owned utilities*.

3 [http://www.leginfo.ca.gov/pub/11-12/bill/sen/sb\\_0001-0050/sbx1\\_2\\_bill\\_20110412\\_chaptered.pdf](http://www.leginfo.ca.gov/pub/11-12/bill/sen/sb_0001-0050/sbx1_2_bill_20110412_chaptered.pdf).

4 California Energy Commission, *Renewables Portfolio Standard Eligibility Guidebook*, Eighth Edition. June 2015. <http://www.energy.ca.gov/renewables/documents/index.html#rps>.

The Energy Commission worked with the Western Governors' Association to develop the Western Renewable Energy Generation Information System (WREGIS) to track and verify renewable energy generation and procurement. WREGIS is an independent renewable energy tracking system for the region covered by the Western Electricity Coordinating Council (WECC).<sup>5</sup> WREGIS issues and electronically tracks renewable energy credits (RECs, also known as WREGIS Certificates) representing renewable energy generation and, beginning with 2008 data, is used for RPS reporting and verification.<sup>6</sup>

The Energy Commission and the California Public Utilities Commission (CPUC) jointly implement the RPS program. For the *2011-2013 Verification Report*, the primary responsibilities of the CPUC are to determine compliance by retail sellers and impose penalties for noncompliance, if necessary. Since the CPUC is responsible for determining compliance, the Energy Commission does not evaluate retail sellers' progress in meeting the RPS procurement requirements in this report. The CPUC will use the data in this report to determine compliance. Interested parties should refer to the retail sellers' compliance filings on the CPUC's website.<sup>7</sup>

While not legally mandated, the *2011-2013 Verification Report* is prepared as a critical part of the Energy Commission's RPS responsibilities. These reports have been published for compliance years 2004-2010. Upon adoption and finalization of the reports, the Energy Commission transmits its RPS procurement verification findings to the CPUC.

The report applies to retail sellers, which include 3 large investor-owned utilities (IOU), 3 small and multijurisdictional utilities (SMJU), 14 electric service providers (ESP), and 1 community choice aggregator (CCA)<sup>8</sup> (**Table 1**).

For reporting year 2011, a total of 18,143 gigawatt-hours (GWh) of renewable energy procurement from 389 generating facilities have been identified as RPS-eligible. For reporting year 2012, a total of 19,266 GWh of renewable energy procurement from 399 generating facilities have been identified as RPS-eligible. For reporting year 2013, a total of 81,265 GWh of renewable energy procurement from 717 generating facilities have been identified as RPS-eligible.

---

5 The Western Electricity Coordinating Council is the regional entity responsible for coordinating and promoting bulk electric system reliability in the Western Interconnection. <https://www.wecc.biz/Pages/home.aspx>.

6 For more information about WREGIS go to <https://www.wecc.biz/WREGIS/Pages/Default.aspx>.

7 CPUC Compliance and Reporting: [http://www.cpuc.ca.gov/RPS\\_Homepage/](http://www.cpuc.ca.gov/RPS_Homepage/).

8 This report does not cover local publicly owned electric utilities (POU). With adoption of SB X1-2, the Energy Commission is responsible for POU's verification and compliance determinations and will prepare a separate POU verification report when the verification analysis is complete. For more information on POU compliance see [http://www.energy.ca.gov/portfolio/pou\\_rulemaking/index.html](http://www.energy.ca.gov/portfolio/pou_rulemaking/index.html).

## Report Organization and Scope

This report is organized into five chapters. Chapter 2 describes WREGIS, the Interim Tracking System (ITS), and RPS verification methods. Chapter 3 provides the retail sellers' procurement verification findings. Chapter 4 presents RPS claim data analysis, and Chapter 5 discusses the limitations of the ITS and verification process, and the outlook for future verification reports.

This *2011-2013 Verification Report* compares RPS claims made by retail sellers with RPS certification records, and the generation and fuel use data of facilities to verify that the claims met the requirements of the *RPS Eligibility Guidebook* to be considered RPS-eligible.

# CHAPTER 2:

## Verification Methods

---

This chapter provides an overview of the WREGIS and ITS reports used by retail sellers to report procurement claims for the RPS, and the specific verification methods used to verify the data covered in this report.

### Sources of Renewables Portfolio Standard Claims Data

For this report, an “RPS claim” or “RPS procurement claim” refers to the amount of electricity a retail seller claimed it procured from a specific RPS-certified generation facility for the RPS. The *RPS Eligibility Guidebook, Seventh Edition*, required that beginning in 2011, retail sellers must report their claims using WREGIS with the exception of test energy generation that occurred before a facility began commercial operations. The system electronically tracks renewable energy credits (REC) that represent renewable energy generation. For each megawatt hour (MWh) of electricity generated and reported, a unique electronic certificate (WREGIS Certificate, also known as a REC) is created. WREGIS functions much like a banking system, with certificates initially deposited into the “active subaccount” of a generator. Certificates can be transferred between accounts but can reside in only one account at any given time, thereby preventing possible double-counting of renewable energy generation as long as the certificates continue to be tracked in WREGIS.

Renewable generators, load-serving entities, and third parties from the western United States, western Canada, and parts of northern Mexico may participate in WREGIS. As a regional system, WREGIS is designed to verify that reported generation is counted only once in California and throughout the geographic area covered by the Western Electricity Coordinating Council (WECC).

Retail sellers must authorize WREGIS to submit California RPS state/provincial/voluntary compliance reports (WREGIS Reports) on their behalf to the Energy Commission. The WREGIS Reports provide RPS claims data by month for RECs, listed by RPS-certified facility and fuel type that were assigned to a retirement subaccount specific to California’s RPS. Prior to the development of WREGIS, retail sellers used the ITS to report RPS procurement claims. The ITS reporting form (CEC-RPS-Track) contains the same data as the WREGIS Report; however, the data are self-reported by the retail seller. The ITS is being phased out. Appendix A summarizes the information reported by retail sellers in the 2011-2013 WREGIS Reports and the ITS CEC-RPS-Track forms.

Retail sellers may “withdraw” an RPS claim from the total procurement amount being claimed if the claim is determined to be ineligible during the verification process. If the claim was reported using the ITS, a retail seller is allowed to submit a revised RPS-Track form to remove the ineligible claim. If the claim was reported using WREGIS, however, a retail seller can “unretire” certificates and submit a revised report only within 12 months of when the

certificates were retired. In cases where a claim is determined to be ineligible but cannot be unretired from the WREGIS Report, the retail seller is given the option to “withdraw” the claim from its total RPS procurement claims. Withdrawn claims are taken out of the verification process and are not counted toward the retail seller’s verified total RPS eligible procurement amount.

Moreover, WREGIS corrects for over- and under-allocation of RECs by adjusting the REC creation amount in future months and sometimes future years. When WREGIS withholds creation of RECs to adjust for a past error, the retail seller can request that the Energy Commission credit the retail seller with the withdrawn RECs in the actual generation year to avoid discounting the retail seller twice. As described in Chapter 3: Verification Analysis, there are situations in which a retail seller withdraws ineligible RECs retired in WREGIS for the year they are ineligible, and has claimed the RECs in the actual generation year. As a result, there may be instances when a retail seller’s WREGIS claims differ from Energy Commission verified data.

For test energy, which is generated prior to a facility beginning commercial operations, the *RPS Eligibility Guidebook, Seventh Edition*, allowed retail sellers to use the ITS to report test energy generation that was not tracked in WREGIS until July 2012.<sup>9</sup> Initially, the WREGIS system created RECs only for generation that occurred during the earliest active certificate issuance cycle at the time the facility was approved in WREGIS. However, the system has been updated and now allows WREGIS to create RECs for test energy that occurred before the generator approval in WREGIS. Retail sellers were able to report test energy using the ITS until this update occurred in July 2012. Only one retail seller used the ITS in the 2011-2013 period to report RPS claims of test energy.

## **Renewables Portfolio Standard Certification and Eligibility Date**

The first step in the Energy Commission’s verification is to determine that all RPS claims are from RPS-certified generating facilities. For the period covered in this report, a facility is RPS-eligible if, as defined in the *RPS Eligibility Guidebook*, it uses an eligible renewable resource or fuel, satisfies resource-specific criteria, and is either located within the state or satisfies applicable requirements for out-of-state and out-of-country facilities.

Claims for generation that occurred before the “eligibility date” of an RPS-certified facility are not eligible.<sup>10</sup> Staff identified these claims, marked them as ineligible, and notified the retail seller making the claim. In response, four retail sellers submitted a request to the Energy

---

9 Section V B. 3. a.: Using the ITS for Test Energy in the *RPS Eligibility Guidebook, Seventh Edition*, states, “Beginning with reporting year 2011, the Energy Commission will accept only retail seller procurement claims for generation that is traced in WREGIS and reported to the Energy Commission using WREGIS State/Provincial/Voluntary Compliance Reports (WREGIS Compliance Reports), except in cases where tracking RECs for test energy was not available in WREGIS.”

10 The eligibility date, or beginning-on date, is the date the Energy Commission deems the first application for a facility received. Generation is typically eligible back to the month containing this beginning-on date. Section IV A. 2. a.: Eligibility Date in the *RPS Eligibility Guidebook, Eighth Edition*, provides additional information.

Commission's Executive Director for an extension to the certification application deadline.<sup>11</sup> The extensions were granted for three of the retail sellers, and the claims from these facilities are now counted as RPS-eligible. For claims made using WREGIS for RECs that had been retired for more than 12 months, retail sellers were not allowed to unretire the ineligible claims.

## Sources of Generation Data

The Energy Commission collects and reviews generation data from various sources as part of the RPS verification. RPS-certified facilities that use nonrenewable fuel or report monthly generation claims on the CEC-RPS-Track form must submit data annually. These data are due to the Energy Commission by April 1 (or the next business day) of each year using the CEC-RPS-GEN or CEC-RPS-Multi-fuel form.

In addition, Energy Commission staff collected generation data from the U.S. Energy Information Administration's (EIA) website. The EIA website provides annual generation information for generation facilities with a capacity greater than 1 megawatt (MW).<sup>12</sup> Staff uses these generation data in its multifuel process and overclaims analysis, as explained in subsequent sections.

Energy Commission staff compared the generation and fuel use data reported on the CEC-RPS-GEN and CEC-RPS-Multifuel forms with the EIA data to ensure accuracy. If the data varied by more than 5 percent, an explanation was requested from the facility owner. Explanations for the variations include, but are not limited to, unit conversion errors, missing periods of reporting in the EIA data, EIA data that included on-site load, and estimated generation and fuel use amounts being reported to the EIA. As a result of this comparison, 12 revised CEC-RPS-GEN and CEC-RPS-Multifuel forms were submitted.

## Multifuel Analysis

RPS-certified multifuel facilities that use a portion of nonrenewable energy resources to generate electricity may be eligible to count 100 percent of the electricity generated for the RPS. Staff determined the amount of RPS eligible generation for each multifuel facility by calculating the percentage of nonrenewable fuel used and comparing the nonrenewable fuel percentage with the allowable de minimis, which is 2 percent of the total fuel use, or nonrenewable fuel use percentage, which is 5 or 25 percent of the total fuel use.

When claims are identified that exceed the allowable fossil fuel usage, the facility owners are notified and provided with the multifuel data analysis. During the analysis of 2011-2013 data, one multifuel issue was identified in which the nonrenewable fuel use amount exceeded the allowable nonrenewable fuel use of 5 percent. The multifuel analysis showed that in 2012, the

<sup>11</sup> See Section VII. D. 3. Extensions of Certification Application Deadline in the *RPS Eligibility Guidebook, Eighth Edition*. <http://www.energy.ca.gov/2015publications/CEC-300-2015-001/CEC-300-2015-001-ED8-CMF.pdf>.

<sup>12</sup> Annual generation data from the U.S. EIA can be downloaded from [www.eia.doe.gov/cneaf/electricity/page/eia906\\_920.html](http://www.eia.doe.gov/cneaf/electricity/page/eia906_920.html).

facility was using 5.89 percent nonrenewable fuel. Although the facility was granted qualifying facility (QF) status by the Federal Energy Regulatory Commission (FERC—meaning it is a small power production facility that meets certification and registration requirements for QF status—it was not able to take advantage of the 25 percent allowance. This was because, at the time of certification, the facility use of nonrenewable fuel did not fall under the permitted uses, as found in Title 18, Code of Federal Regulations, Part 292.204(b)(2) and the facility did not certify as a QF for the RPS. According to the *RPS Eligibility Guidebook, Seventh Edition*, a facility needs to be continuously certified as a QF to maintain QF status. The retail seller claiming this generation withdrew the claim amount that exceeded the eligible generation of this facility.<sup>13</sup>

## Overclaim Analysis

After compiling RPS claims and generation data, staff compared the annual total of RECs claimed by all load-serving entities (LSE) from each RPS-certified facility with the annual amount of electricity generated by each facility to ensure that the annual amount claimed did not exceed the annual amount generated. If two or more LSEs claimed procurement from the same facility, staff compared the cumulative amount of RECs claimed from that facility with the total amount of electricity generated by that facility.

For 2011-2013, staff conducted two separate analyses to determine possible overclaims. In the first analysis, eligible generation data that were submitted directly to the Energy Commission on the CEC-RPS-Multi-fuel and the CEC-RPS-GEN forms was used. Staff compared eligible generation to the total claims and, if the claims exceeded generation for a given year, supporting information from the retail seller was requested. More than 26 overclaim issues were eventually resolved by reviewing meter data and invoices. Two remaining overclaim issues that could not be resolved resulted in the claims being withdrawn.

During the second overclaim analysis, staff compared the total claims for facilities that did not submit a CEC-RPS-Multi fuel or CEC-RPS-GEN form with generation data that came from a source outside the Energy Commission, such as the EIA. Since claim data are reported through WREGIS, supporting documentation was requested from the retail seller to support the RPS claims if the claims exceeded generation by more than 15 percent for a given year. In the past, this request was made if the difference was 5 percent or higher. However, the data analysis method for 2011-2013 allows for a 15 percent difference between generation and procurement figures to account for possible reporting differences. These differences may occur for reasons such as rounding errors when comparing data sources that use different energy units (for example, MWh versus kWh). Staff reviewed supporting documentation, such as invoices or meter data. If there was insufficient supporting documentation, the claim was deemed ineligible. During the verification for this report, 41 overclaim issues were identified and

---

<sup>13</sup> *RPS Eligibility Guidebook, Seventh Edition* page 48 states, “Facilities that commenced commercial operations before January 1, 2002, were certified and operational as a renewable qualifying small power production facility (QF) pursuant to the federal Public Utility Regulatory Policies Act before January 1, 2002, and are currently certified by the Federal Energy Regulatory Commission (FERC) as a renewable QF, may use up to 25 percent nonrenewable fuels and the entire electrical generation output of the facility will be considered RPS - eligible.”

eventually resolved with supporting documentation. One overclaim issue resulted in the retail seller withdrawing claims.

## **Renewable Energy Credit Claims Relative to the Vintage of the Credits**

Public Utilities Code Section 399.21 (a)(7) allows LSEs to retire RECs up to 36 months after the RECS are generated, which means LSEs may retire RECs in years other than the vintage year. The overclaim analysis is more complicated for this compliance period than in previous years because RECs generated in the same year from the same facility may be retired in different reporting years.<sup>14</sup> Staff reconciled these issues by compiling claims based on the vintage year of the REC instead of the year that it was reported. This approach can take into account only RECs that have been reported during the verification period of 2011-2013, and there may be 2011-2013 vintage RECs that will be reported in a future year. Energy Commission staff will continue to recalculate the overclaim analysis in the future as additional RECs are reported. The Energy Commission will update the verification results presented in this report or in a future compliance period depending on the circumstances if issues are found with 2011-2013 claims reported as RPS-eligible.

## **Biomethane Analysis**

This report covers claims from RPS-certified generating facilities using biomethane for 2011-2013.<sup>15</sup> A detailed description of the biomethane analysis is provided below. Energy Commission staff was able to verify all of the biomethane claims submitted as eligible.

### **Verification Requirements for Biomethane Claims**

As of January 2008, the *RPS Eligibility Guidebook* established the following requirements for the use of biomethane delivered through the natural gas pipeline system:

1. The gas must be produced from an RPS-eligible resource, such as biomass or digester gas.
2. The gas must be injected into a natural gas pipeline system that is either within the WECC region or interconnected to a natural gas pipeline system in the WECC region that delivers gas into California.
3. The energy content of the gas produced and supplied to the transportation pipeline system must be measured monthly and reported annually, illustrated by month.

---

<sup>14</sup> “Reporting year” refers to a particular year within a compliance period for which the annual generation has already occurred and for which the RECs are being retired and used for RPS compliance. The reporting year is not the year in which the retired RECs are reported; it is the year for which the retired RECs are reported and, on an annual basis, should typically represent the calendar year preceding the reporting due date. Retail sellers reported 2011 and 2012 claims in August 2013, and 2013 RPS claims in July 2014.

<sup>15</sup> For this report, “biomethane” or “pipeline biomethane” refers to biogas that has been upgraded or otherwise conditioned to meet the gas quality standard applicable to the natural gas transportation pipeline system and is delivered to the generating facility using the natural gas transportation pipeline system in accordance with the *RPS Eligibility Guidebook*.

Reporting shall be in units of energy (for example, one million British thermal units [MMBtu]), based on metering of gas volume and adjusted for measured heat content per volume of each gas. In addition, the total amount of gas used at the RPS-eligible facility must be reported in the same units measured over the same period, and the electricity production must be reported in MWh.

4. The gas must be used at a facility that has been certified as RPS-eligible. As part of the application for certification, the applicant must attest that the RPS-eligible gas will be nominated to that facility or nominated to the LSE-owned pipeline serving the designated facility.

In its annual RPS procurement verification reports, Energy Commission staff calculates the RPS-eligible energy produced from biomethane using the method discussed above.

In addition to these requirements, beginning on January 1, 2011, the *RPS Eligibility Guidebook* required that the RPS-certified facility, or the biomethane supplier, enter into contracts for the delivery or storage of the gas with every pipeline or storage facility operator transporting or storing the gas from the injection point to California (or to the RPS-certified facility if the RPS-certified facility is located outside California). This reporting is required to prevent natural gas from inadvertently being counted as RPS-eligible.

Depending on the delivery requirements applied, biomethane verification may include both physical and contractual verification requirements. The physical verification requirements must come from the biomethane source and from the RPS-certified facility. The contractual verification requirements include invoices for the injected biomethane and proof of the physical path for biomethane delivery. Staff confirmed that the biomethane used at an RPS-certified facility met these requirements by requesting, as applicable, the following information from the RPS-certified facilities or retail seller:

1. The pipeline delivery path of the biomethane from the gas source to the RPS-certified facility.
2. Copies of contracts for each pipeline section of the delivery path, as well as the contract for the purchase of the biomethane.
3. Monthly energy content and volume meter data for the gas injected in the pipeline at the source as well as for the gas taken from the pipeline at the generating facility. Invoices cannot be substituted for meter data.
4. Invoices for the purchases of biomethane.
5. In the event that biomethane was stored for later use at the facility, contracts for storage with the pipeline operators and monthly storage statements for this gas.

## Verification Process for Biomethane Claims

Energy Commission staff worked closely with the retail sellers on the analysis of biomethane claims. All biomethane amounts were analyzed on an energy basis in units of MMBtu, and all electrical generation was analyzed in units of MWh.

Energy Commission staff reviewed the gas delivery contracts, when applicable, to ensure that there was a physical path available during the time of delivery from the biomethane source to the RPS-certified generating facility. This analysis helped ensure that only the biomethane fuel that was purchased, delivered, and used by the RPS-certified facility could count toward the RPS claim amounts. Staff also examined the monthly invoices of the RPS-certified facility to ensure it had purchased the biomethane.

Next, the physical verification requirements were analyzed. Energy Commission staff compared the biomethane fuel purchase invoices, pipeline injection reports, and pipeline nomination reports showing delivery amounts on a monthly basis. The lesser value for each month from these three sources was taken as the verifiable biomethane fuel amount for the month. Only the lesser of the injected, delivered, or invoiced amounts was accepted on a monthly basis to ensure that no nonrenewable fuel was inadvertently counted as RPS-eligible.

After determining the total RPS-eligible amount of biomethane delivered to the RPS facility for the year or the contracted time frame (based on the monthly analysis described above), a strict monthly correlation between the amounts of eligible biomethane fuel and the RPS-eligible generation was not required. Instead, the ratio of the total RPS-eligible amount of biomethane for the year and the total amount of fuel consumed at the RPS-certified facility for the same year was multiplied by the total electrical output of the RPS-certified facility for the same year to derive the total amount of RPS-eligible generation produced that year, as shown in the following equation:

$$RPS\ Eligible\ Generation = \frac{RPS\ Eligible\ Biomethane\ (MMBtu)}{Total\ Fuel\ Use\ At\ RPS\ Certified\ Facility\ (MMBtu)} \times Total\ Generation\ (MWh)$$

However, in all cases, no more electricity generation than that corresponding to the total allowable amount of gas could be counted for the RPS. Allowing for some flexibility in the reporting of monthly RPS claims helped account for any WREGIS REC creation issues in which the number of RECs created in one month could be lower than the amount of verified RPS-eligible gas that was delivered to the RPS-certified electrical generation facility in that same month. Such accounting adjustments may occur in WREGIS, and the lower amount is later adjusted in a subsequent WREGIS REC creation cycle, resulting in REC amounts that may not mirror the monthly biomethane delivered amounts. Requiring RPS claims to match the amount of RPS-eligible gas amount delivered in a particular month would make the reporting and verification analysis too burdensome, and is not necessary as long as the total RPS-eligible biomethane amount does not exceed the amount of verified RPS-eligible biomethane delivered to the facility in a particular year or contracted time frame.

## **Verification Analysis of Specific Biomethane Claims**

Only two retail sellers had specific biomethane claims from 2011 to 2013 and neither had any issues.

## **Coordinating With Other States**

Energy Commission staff collaborated with staff from the Oregon Department of Energy (ODOE) regarding the California and Oregon RPS programs. Energy Commission staff determined the 2011-2013 RPS claims for California's RPS program that were tracked and reported through WREGIS were not double-counted in Oregon's RPS program because they also require the use of WREGIS to track RPS data. For claims reported for 2011-2013 outside of WREGIS using the ITS, Energy Commission staff provided a list of the ITS claims to ODOE staff for review. The ODOE staff confirmed that the facilities claimed on the ITS are not eligible for Oregon's RPS program, so there are no double-counting issues for these claims. Staff from both agencies will continue to collaborate to help ensure California RPS claims made by retail sellers and/or POUs using the ITS are not also claimed for Oregon's RPS using WREGIS.

## **Coordinating With the Voluntary Renewable Energy Credit Market**

In addition to working with other states to protect against double-counting, Energy Commission staff coordinated with Green-e Energy<sup>16</sup> (Green-e) to verify that California RPS claims for 2011-2013 were not being counted on the voluntary REC market.

To begin the analysis, Green-e staff provided a list of all generating facilities in the WECC that participate in the Green-e program along with the facilities. The list included about 530 facilities and identified various facility-related information, including facility location, fuel type, nameplate capacity, and EIA ID or QF ID number, if available.

Energy Commission staff used the list of Green-e certified facilities to determine which facilities are also RPS-certified. It is often difficult to determine whether a Green-e-certified facility and an RPS-certified facility are in fact the same facility because many facilities have similar names, fuel types, and locations.

Once facilities were confirmed as both Green-e and RPS-certified, it was determined which of those facilities had RPS claims reported for 2011-2013. The total procurement claim amount of the facilities was determined and then compared with the total generation, which was either reported to the Energy Commission on the CEC-RPS-GEN or CEC-RPS-Multi-fuel forms or acquired from the EIA. The percentage difference between the generation amount and the total procurement claim amount was calculated for each facility. If the result showed that the total

---

<sup>16</sup> Green-e Energy, a program of the Center for Resource Solutions, is an independent consumer protection program for the sale of renewable energy in the voluntary retail market; see [www.green-e.org](http://www.green-e.org). Green-e Energy does not require the use of WREGIS.

claimed amount was over the generation amount by 5 percent or more, it was considered an overclaim.

Because the transaction data for Green-e are confidential, Energy Commission staff provided a table listing the 28 overclaims for Green-e staff's review. Green-e notified the Energy Commission of instances where the purchasing entity that acquired the Green-e-certified generation was the same entity claiming the generation for the RPS. For these claims, the Green-e-certified claim was no longer included in the total procurement calculation, and the overclaims were resolved.

After this analysis, there were 18 facilities that continued to have an overclaim issue. Energy Commission staff contacted the utility representatives to obtain documentation confirming that the retail seller purchased the RECs they were claiming. Staff reviewed the documentation from each retail seller and determined that it matched the RPS procurement claims, which resolved the overclaim concerns. Staff shared this information with Green-e, who confirmed that the data resolved the issues for them as well.

## **Finalizing Verified Data**

The draft preliminary verification results tables were posted on the Energy Commission website for public comment on February 2, 2016. Comments received on the draft tables were considered and incorporated as appropriate.

Within 30 days of the Energy Commission's adoption and posting of the final *2011-2013 Verification Report*, retail sellers must file verified RPS compliance reports with the CPUC using Energy Commission-verified RPS procurement data.<sup>17</sup> Retail sellers' RPS compliance reports are served on the service list for the RPS proceeding and made publicly available on the CPUC's website.<sup>18</sup>

# CHAPTER 3:

## Verification Results

---

This chapter presents procurement verification findings for retail sellers (IOUs, MJUs, ESPs, and CCAs). A facility must be certified by the Energy Commission for the generation to be eligible for the RPS. RPS claim amounts are identified as eligible, ineligible, or withdrawn, along with a brief description of the particular issues affecting these claims. In some cases, the retail seller requested that the Energy Commission withdraw an ineligible claim amount. In other cases, as described below, staff resolved outstanding issues from the *2008-2010 RPS Verification Report*<sup>19</sup> with the data in this report.

The following sections summarize verification determinations for retail sellers' RPS claims for Compliance Period 1 (2011-2013).

Summary tables show RPS claim totals for Compliance Period 1 and include:

- Total RPS claims reported.
- Ineligible claims.
- Withdrawn claims.
- Claims eligible toward the RPS.

## Verification Results for Investor-Owned Utilities

### Pacific Gas and Electric Company

PG&E does not have any pending, withdrawn, or ineligible RPS claims. During the verification, however, it was found that PG&E did have RPS claims from a facility that were generated before the facility RPS eligibility date. The facility submitted a request to the Energy Commission's Executive Director for an extension of the certification application deadline. This request was granted, and the eligibility date of the facility was extended to cover the period of the claims. These claims were then determined to be RPS-eligible.

Amount withdrawn by LSE	0
<b>Claims Eligible Toward the RPS</b>	<b>46,379,618</b>

Source: RPS staff analysis of PG&E's 2011-2013 WREGIS Compliance Reports, CEC-RPS-Track Form, and supporting documentation

All of PG&E's 2011-2013 RPS claims were reported in WREGIS Reports. However, PG&E did submit a CEC-RPS-Track form at the request of Energy Commission staff to report generation that was marked as ineligible in the *2008-2010 RPS Verification Report*.<sup>20</sup> This process was used to allow PG&E to count generation for which RECs were not created in WREGIS due to the WREGIS prior period adjustment process.

**Table 3** shows the claim amounts that had previously been reported in a WREGIS report but were withdrawn in the *2008-2010 RPS Verification Report*. PG&E reported these claims on the CEC-RPS-Track form to account for adjustments made in WREGIS. These claims have been verified as RPS-eligible and are included in the "Claims Eligible Toward the RPS" amount listed in **Table 2**.

---

<sup>20</sup> The *Renewables Portfolio Standard 2008-2010 Procurement Verification Commission Final Report* states, "Five of the claims in which a portion of the procurement was requested to be withdrawn involved RECs that, for various reasons, were erroneously created in WREGIS. To correct the errors, WREGIS will withhold creation of an equal number of RECs for each facility's 2011 or 2012 REC amounts. Energy Commission staff determined that PG&E could correct the error in a future year by requesting to apply the 'withdrawn' claim amount in a future year to account for when WREGIS reduces the amount of RECs created for these particular facilities. This process allows the RPS Verification Report to reflect the eligible claim amounts by vintage year, regardless if the vintage date indicated on the certificate is not correct. Moreover, by allowing the withdrawn amount to be counted in a future Verification Report, this process prevents PG&E from being doubly discredited through the verification process when WREGIS withholds creation of an equivalent amount of RECs from the specific facilities to correct the error."

**Table 3: PG&E's 2008 and 2009 Withdrawn Claims Reported for 2011 and 2012 to Correct for WREGIS Adjustments**

Year of Generation	Facility Name	RPS ID	WREGIS Adjustment Amounts Claimed on CEC-RPS-Track Form (MWh)
2011	Waste Management Renewable Energy	60096	3,896.00
2012	Amedee Geothermal Venture I	60111	337.79
2012	Wineagle Developers 1	60193	1,399.26

Source: RPS staff analysis of PG&E's 2008-2010 WREGIS Compliance Reports and PG&E documentation requesting these RPS amounts be withdrawn and applied to PG&E in the 2011-2013 verification report due to WREGIS prior period adjustments

### San Diego Gas & Electric Company

SDG&E has 2,008 MWh of withdrawn claims. During the multifuel analysis, it was found that Coyote Canyon exceeded the allowable nonrenewable fuel use for 2012 by 3.89 percent. SDG&E worked with Energy Commission staff by submitting additional documentation. Based on the provided documentation, Energy Commission staff found that SDG&E's vintage 2012 claims, which were reported in 2013, exceeded the eligible generation reported by the facility. SDG&E's claims exceeded the eligible generation amount by 2,008 MWh. SDG&E requested that 2,008 MWh be counted as withdrawn.

### Southern California Edison Company

SCE requested that 27 MWh of its claims be withdrawn. During the overclaim analysis, it was determined that SCE's vintage 2011 claims from the SPVP022 facility, which were reported in 2012, exceeded the 2011 annual generation reported by the facility to the EIA. SCE's claims exceeded the generation amount by 27 MWh. When SCE was notified of this overclaim, it requested that the 27 MWh be withdrawn.

<b>Ineligible Claims:</b>	
Amount ineligible because facility is not RPS-certified when RECs were created	
Amount ineligible because the claim was retired more than 36 months after the vintage of the RECs	
Amount ineligible due to double claiming of RECs	
Amount ineligible because facility exceeded fossil fuel usage limit or used ineligible fuel	
Amount ineligible because generation not reported through WREGIS	26,509
<b>Withdrawn Claims</b>	
Amount withdrawn by LSE	27
<b>Claims Eligible Toward the RPS</b>	<b>46,132,127</b>

Source: RPS staff analysis of SCE's 2011-2013 CEC-RPS-Track Forms, WREGIS Compliance Reports and supporting documentation

SCE claimed 26,509 MWh from the Shepherds Flat North facility that are ineligible due to being reported on the ITS instead of WREGIS. Retail sellers were required to report RPS claims using WREGIS beginning in 2011, with the only exceptions being reporting prior period adjustment corrections and test energy that was generated prior to July 2012. These claims did not fit either of these exceptions, so the claims are counted as ineligible for the RPS.

SCE is claiming generation with a generation (vintage) date prior to 2011. SCE reported claims from Coso Power Developers and Coso Energy Developers for a total of 9,730 MWh with a vintage date of 2009 and claims from Goshen Phase II for 27 MWh with a vintage date of 2010. SCE has provided documentation from WREGIS showing that these claims were part of a prior period adjustment that occurred in WREGIS. Generation from these facilities was reported incorrectly in WREGIS, and too many RECs were created. When the error was discovered, WREGIS corrected it by not creating the full amount of RECs in 2011 to compensate for the error. SCE held onto the extra 2009 and 2010 RECs in those reporting years because the RECs did not represent the actual 2009 and 2010 generation of the facilities. Although the vintage year of the RECs is 2009 and 2010, these RECs represent generation that occurred in 2011. As a result, SCE has reported these RECs for Compliance Period 1.

## Verification Results for Small and Multijurisdictional Utilities

### Bear Valley Electric Service

Bear Valley Electric Service has 60 MWh of withdrawn claims. During the verification, it was found that BVES' vintage 2011 claims from the Palos Verdes Gas-to-Energy Facility, which were reported for both 2011 and 2012, exceeded the 2011 annual generation amount reported by the facility. BVES' claims exceeded the generation amount by 60 MWh. When BVES was notified of this overclaim, it requested that the 60 MWh be withdrawn.

**Table 6: Bear Valley Electric Service's Summary of RPS Claims**

## Liberty Power Holdings LLC

Liberty Power has 81 MWh of claims counted as ineligible for the RPS. The claims were generated in October and November 2013, however the facilities' RPS eligibility dates were December 2013 and January 2014. Generation is not eligible to be claimed for the RPS before the eligibility date of the facility, so the claims are counted as ineligible.

Pilot Power Group, Inc. (Pilot) claimed vintage 2009 generation from the out-of-state facility, Hopkins Ridge Wind Project, RPS ID 60745. Pilot originally claimed this generation in 2009. During the 2008-2010 verification process, while Energy Commission staff was verifying that the energy delivery met the requirements of the *RPS Eligibility Guidebook, Third Edition*, it was discovered that the contract execution date of this claim occurred in 2011. Due to the requirement that generation cannot be applied to a year prior to when it was procured, this claim was determined to be ineligible to use for the RPS in 2009.

Pilot requested that the claim be counted as “withdrawn” instead of “ineligible” because the claim was made through WREGIS and the certificates could not be unretired. Although the claim is not eligible for 2009, it is eligible to be claimed for reporting year 2011 or later (within the CPUC’s 36 month retirement requirement). Pilot reported this claim for 2011, and the Energy Commission has verified the claim as RPS-eligible.

# CHAPTER 4:

## Verification Analysis

---

The Energy Commission verifies RPS claims reported in WREGIS reports and CEC-RPS-Track forms. These claims represent the renewable energy that California's retail sellers have procured and retired for the RPS for the 2011-2013 compliance period. Data include information about the location, fuel type, and timing of the renewable energy. This chapter provides analyses of the RPS procurement claim data to demonstrate RPS-eligible procurement by resource type.

### RPS-Eligible Procurement by Resource Type

Increasing the diversity of California's energy mix is an important goal of the RPS program.<sup>21</sup> The list of renewable resources eligible for the RPS during the 2011-2013 compliance period is available in the *RPS Eligibility Guidebook, Seventh Edition* (page 8). **Table** shows the amount of renewable energy claimed by each IOU from the different renewable resources by year.<sup>22</sup> ESP and CCA amounts are not included in this table. There were no claims by IOUs for the following renewable resources during 2011-2013: biodiesel, fuel cell, water supply or conveyance system, incremental hydroelectric, municipal solid waste conversion, ocean thermal, ocean wave, and tidal current. **Figure 1** shows the percentage of different resource types by year with the exception of conduit hydroelectric since it represented only 1 percent of the fuel mix in 2011 and 0 percent in both 2012 and 2013. **Figure 2** shows total procurement from each resource type for all retail sellers, including ESPs and CCAs, for 2011-2013.

As the following tables illustrate, there was a diverse renewable resource mix used to satisfy retail sellers' RPS requirements during the first compliance period. Proportionally, the total amounts by fuel type have risen each year, with wind overtaking geothermal as the most used renewable fuel type in 2012 and 2013. Geothermal remained the second most used fuel type in these later years. Photovoltaic had the highest growth rate during this time period. Also, the results show that small hydroelectric generation decreased over this period, which is likely due to the drought that impacted much of the western United States.<sup>23</sup>

# CHAPTER 5:

## Verification Limitations and the Future

---

This chapter describes limitations associated with the Interim Tracking System (ITS) and describes how verification efforts will change as a result of SB X1-2.

### Limitations of the Interim Tracking System and Verification Process

This report presents Energy Commission's verified RPS procurement data results; however, some limitations are noted.

The ITS restricts the extent to which the Energy Commission can cross-reference California RPS claims with REC claims made on the voluntary market and in other states. As discussed in Chapter 2, Energy Commission staff coordinated with staff from energy agencies in Oregon to cross-reference California RPS procurement with RPS claims made in their state. In addition, staff's ability to protect against double-counting is limited by reporting requirements and availability of data in each state. The transition from the ITS to WREGIS has significantly reduced the risk of double-counting of California RPS claims.

Energy Commission staff has limited information about specific purchases in which RECs are sold separately from the associated electricity. In other regulatory and non-regulatory markets, generators, marketers, or brokers may sell unbundled RECs (where the renewable component is sold as a separate commodity from the energy itself) to individuals, companies, utilities, or other organizations. The Energy Commission does not track these voluntary transactions but collaborates with Green-e Energy.<sup>25</sup> As a result, some, but not all, RPS claims are cross-checked with unbundled RECs sold in the voluntary market, since Green-e Energy does not certify the entire voluntary REC market.

The robustness of the ITS is also limited by the quality of the generation data that are provided. In some cases, the generation data<sup>26</sup> used for the analysis in this report are self-reported and not independently verified by third parties. WREGIS addresses this limitation because it tracks renewable energy transactions throughout the WECC and is mostly supported by metered generation data from qualified reporting entities, rather than self-reported generation data. Retail sellers used WREGIS to report the vast majority of RPS claims for 2011-2013, while the POUs transitioned from the ITS to WREGIS during the 2011-2013 period.

A Microsoft Access® database was developed to allow for more accurate and efficient verification of RPS claims. When using the database, if a discrepancy is found in which the total

---

<sup>25</sup> Green-e Energy, a program of the Center for Resource Solutions, is an independent consumer protection program for the sale of renewable energy in the voluntary retail market. [www.green-e.org/](http://www.green-e.org/).

<sup>26</sup> Generation data may be collected from the following sources: CEC-RPS-GEN form, EIA, requested meter data, and invoices.

annual claim amount appeared to exceed total annual generation from a facility, supporting information was requested from the retail seller making the claim.

Following this approach, supporting information was requested and received from the retail sellers in all of these cases. In some instances, procurement claim amounts were adjusted downward to match the generation amount; in cases where the supporting data matched the claim, the claims were accepted.

While the Energy Commission recognizes the limitations of the ITS, it is important that this verification report reflects staff's review of more than 2,390 RPS claims reported by retail sellers and checked against the POU's RPS claims, RPS claims in other states, and entities participating in the voluntary REC market for 2011-2013. The method and results have benefited from public input, and staff believes they are as accurate as possible.

## Long-Term Verification

The *RPS Eligibility Guidebook, Seventh Edition* clarified the RPS reporting requirements for retail sellers and POU's starting in 2011.<sup>27</sup> For retail sellers, the RECs retired for the reporting year must be reported to the Energy Commission by July 1 of the following year.

Because of the technical complexity of SB X1-2, the Energy Commission is currently developing a more robust, streamlined, and user-friendly RPS certification and verification/compliance online database system, which the Energy Commission and LSEs will use for data submittal and analysis.

## Outlook for Future Reports

The Energy Commission plans to verify RPS procurement claims annually for each year of a multiyear compliance period based on annual procurement data submitted by retail sellers and POU's for the preceding reporting year. The Energy Commission will verify whether RPS claims are consistent with the requirements of the current edition of the *RPS Eligibility Guidebook* and other applicable *RPS Eligibility Guidebooks*. For POU's, RPS claims must be consistent with the Energy Commission's regulations for *Enforcement Procedures for the RPS for POU's*. Staff will work with each retail seller and POU to verify the reported RPS claims. Findings will be posted on the Energy Commission's website.

Following the end of each compliance period, the verification results of the intervening years will be combined with those for the final year of the compliance period and RPS verification reports summarizing the results will be prepared.

The Energy Commission expects to prepare two RPS verification reports for each compliance period, one for retail sellers, the *RPS Retail Seller Verification Report* (as found here), and one for POU's, the *RPS POU Verification and Compliance Report*.

---

<sup>27</sup> See <http://www.energy.ca.gov/2013publications/CEC-300-2013-005/CEC-300-2013-005-ED7-CMF.pdf> Section V. Reporting Tracking Systems, Reporting and Verification.

# Glossary

---

- AB — Assembly Bill – State legislation that originated in the California State Assembly.
- CCA — Community choice aggregator – As defined in Public Utilities Code Section 331.1, a *community choice aggregator* refers to any of the following entities, if that entity is not within the jurisdiction of a local publicly owned electric utility that provided electrical service as of January 1, 2003: any city, county, or city and county whose governing board elects to combine the loads of its residents, businesses, and municipal facilities in a communitywide electricity buyers' program or any group of cities, counties, or cities and counties whose governing boards have elected to combine the loads of their programs, through the formation of a joint powers agency established under Chapter 5 (commencing with Section 6500) of Division 7 of Title 1 of the Government Code.
- CPUC — California Public Utilities Commission – an agency that regulates privately owned public utilities California, including electric power, telecommunications, natural gas, and water companies. Energy Commission and the California Public Utilities Commission staff have been designated as having special status to work collaboratively and participate in confidential deliberations concerning decision-making on the implementation of the Renewables Portfolio Standard.
- DG — Distributed generation – a small-scale electricity generation facility that is interconnected to a distribution network and is generally 20 MW or smaller. DG facilities may serve on-site load or off-site load or both.
- ESP — Electric service provider – as defined in Public Utilities Code Section 218.3, refers to an entity that offers electrical service to customers within the service territory of an electrical corporation but does not include an entity that offers electrical service solely to service customer load consistent with Public Utilities Code Section 218, Subdivision (b), and does not include an electrical corporation or a public agency that offers electrical service to residential and small commercial customers within its jurisdiction, or within the service territory of a local publicly owned electric utility. An ESP includes the unregulated affiliates and subsidiaries of an electrical corporation.
- FERC — Federal Energy Regulatory Commission – an independent agency that regulates the interstate transmission of natural gas, oil, and electricity.
- ITS — Interim Tracking System – the process that the Energy Commission used to verify RPS procurement claims during the development of the Western

Renewable Energy Generation Information System. This approach used available generation data to check against procurement claims and account for renewable energy procurement claims on the voluntary market and other renewable energy reporting programs, such as those in other states, and also used energy delivery documentation to verify Renewables Portfolio Standard claims from out-of-state.

- IOU — Investor-owned utility - an electrical corporation, which for the the RPS, refers collectively to Pacific Gas & Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company.
- kWh — Kilowatt hour – the most commonly used unit of measure telling the amount of electricity consumed over time. It means one kilowatt of electricity supplied for one hour. A typical California household consumes about 500 kWh in an average month.
- LSE — Load-serving entity – an entity that provides electric service to end users and wholesale customers.
- MJU — Multijurisdictional Utility – an electrical corporation with 60,000 or fewer customer accounts in California as of January 1, 2010, and that serves retail end-use customers outside California, is located in a control area that is not under the control of a California balancing authority, receives the majority of its electrical requirements from generating facilities located outside California, and is subject to the provisions of Public Utilities Code Section 399.17. Sierra Pacific Power and PacifiCorp are the only MJUs covered in this report.
- MW — Megawatt – 1,000 kilowatts. One megawatt is about the amount of power required to meet the peak demand of a large hotel.
- MWh — Megawatt hour – a unit of measure describing the amount of electricity consumed over time. It means 1 megawatt of electricity supplied for one hour. In 2014, two typical California households consume a combined total of about 1 MWh in an average month, and one household consumes about 0.56 MWh per month according to average monthly consumption data reported to the EIA.
- PG&E — Pacific Gas & Electric Company - a California IOU that operates in the northern two-thirds of California. PG&E has reported renewable energy procurement to the Renewables Portfolio Standard program since 2001.
- PURPA — Public Utilities Regulatory Policies Act - an act of Congress passed as part of the National Energy Act in 1978 to promote greater use of domestic renewable energy by requiring regulated electric utilities to buy power from other more efficient producers, if that cost was less than the utility's own "avoided cost" rate to the consumer. PURPA was amended in 2005 by the

federal Energy Policy Act of 2005 by sections 1251 through 1254.

- QF — Qualifying small power production facility - a facility eligible for certification under Section 292.207 of Title 18 of the Code of Federal Regulations.
- REC — Renewable Energy Credit/Certificate - as defined in Public Utilities Code Section 399.12, Subdivision (h)(1), to mean a certificate of proof, issued through the accounting system established by the Energy Commission under Section 399.25, that one unit of electricity was generated and delivered by an eligible renewable energy resource. As specified in Section 399.12, Subdivision (h)(2), a REC includes all renewable and environmental attributes associated with the production of electricity from an eligible renewable energy resource, except for an emissions reduction credit issued under Section 40709 of the Health and Safety Code and any credits or payments associated with the reduction of solid waste and treatment benefits created by the use of biomass or biogas fuels. As specified in Section 399.12, Subdivision (h)(3), electricity generated by an eligible renewable energy resource attributable to the use of nonrenewable fuels, beyond a de minimis quantity, as determined by the Energy Commission, shall not result in the creation of a REC.

As defined by the CPUC in Decision D.08-08-028, a REC for compliance with the California Renewables Portfolio Standard is “a certificate of proof, issued through the Western Renewable Generation Information System [sic], that one megawatt-hour of electricity was generated by an RPS-eligible renewable energy resource and delivered for consumption by California end-use retail customers. A REC includes all renewable and environmental attributes associated with the production of electricity from the eligible renewable energy resource, including any avoided emission of pollutants to the air, soil or water; any avoided emissions of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, or any other greenhouse gases that have been determined by the United Nations Intergovernmental Panel on Climate Change, or otherwise by law, to contribute to the actual or potential threat of global climate change; and the reporting rights to these avoided emissions, such as Green Tag reporting rights. A REC does not include any emissions reduction credit issued pursuant to § 40709 of the Health and Safety Code or any credits or payments associated with the reduction of solid waste or treatment benefits created by the utilization of biomass or biogas fuels. A REC also does not include any energy, capacity, reliability or other power attributes of the generation; any tax credits or other financial incentives in the form of credits, reductions, or allowances associated with the generation that are applicable to a state or federal income taxation obligation; any fuel-related

subsidies or "tipping fees" or local subsidies received by the generator for the destruction of particular preexisting pollutants or the promotion of local environmental benefits; or emission reduction credits (whether issued pursuant to § 40709 of the Health and Safety Code or any other authority) that are encumbered or used by the generator for compliance with local, state, or federal operating and/or air quality permits.

In accordance with Public Utilities Code Section 399.21, Subdivision (a)(4), no REC may be created based on any electricity generated pursuant to any contract with a California retail seller or a local publicly owned electric utility executed before January 1, 2005, unless the contract contains explicit terms and conditions specifying the ownership or disposition of the RECs. In accordance with Public Utilities Code Section 399.21, Subdivision (a)(4), a REC may not be created based on any electricity generated pursuant to a contract with a qualifying facility pursuant to the Public Utility Regulatory Policies Act of 1978 that was executed after January 1, 2005. A REC cannot be created with respect to electricity generated by an eligible renewable energy resource attributable to the use of nonrenewable fuels, beyond a de minimis quantity as determined by the CEC."

- REP — Renewable Energy Program - a program implemented by the Energy Commission's Renewable Energy Office.
- RPS — Renewables Portfolio Standard - California's Renewables Portfolio Standard as established in Public Utilities Code Section 399.11, et seq. and defined in Public Utilities Code Section 399.12, Subdivision (i), to mean the specified percentage of electricity generated by eligible renewable energy resources that a retail seller or local publicly owned electric utility is required to procure pursuant to Public Utilities Code Section 399.11 et seq. Under the RPS, a retail seller or local publicly owned electric utility must increase its total procurement of eligible renewable energy resources so that 33 percent of its retail sales are procured from eligible energy resources no later than December 31, 2020.
- SB — Senate Bill - State legislation that originated in the California State Senate.
- SCE — Southern California Edison Company - a California IOU that is the primary electricity supply company for much of Southern California. SCE has reported renewable energy procurement to the RPS program since 2001.
- SDG&E — San Diego Gas & Electric Company - a California IOU that provides natural gas and electricity to San Diego County and southern Orange County. SDG&E has reported renewable energy procurement to the RPS program since 2001.
- SMJU — Small and Multijurisdictional Utility - an electrical corporation with 60,000

or fewer customer accounts in California as of January 1, 2010. Sierra Pacific Power and PacifiCorp are the only SMJUs covered in this report.

- WECC — Western Electricity Coordinating Council - formed on April 18, 2002, by the merger of the Western Systems Coordinating Council, Southwest Regional Transmission Association, and Western Regional Transmission Association. WECC is responsible for coordinating and promoting electric system reliability, assuring open and nondiscriminatory transmission access among members, and providing a forum for resolving transmission access disputes.
  
- WREGIS — Western Renewable Energy Generation Information System - The Western Governors' Association developed the WREGIS in association with the Energy Commission and using Energy Commission funding. WREGIS is an independent renewable energy tracking system for the region covered by the WECC. WREGIS electronically tracks RECs (WREGIS Certificates) representing renewable energy generation and, beginning with 2008 data, is used for RPS reporting and verification.

# APPENDIX A: Retail Sellers' Summary Claims Reports

---

Appendix A is the Individual Retail Sellers' Summary Claims Reports. It includes the retail sellers' 2011-2013 RPS claims reported on both WREGIS Reports and the CEC-RPS-Track forms. The Summary Claims Reports are listed in alphabetical order by retail seller type, with ESPs listed first, followed by SMJUs and IOUs.

The Summary Claims report includes an "Eligible Generation Amount" for facilities that reported generation data on a CEC-RPS-GEN or CEC-RPS-Multi-fuel form. These amounts were used for comparison with the RPS claims, and represent the maximum amount of the facility's generation that can be claimed for the RPS. The retail seller may not claim the entire eligible generation amount, and the amount of eligible generation in excess of the "Annual Generation Claimed" may be claimed for a different year, within 36 months of the date that it was generated, reported by another LSE, or used for a program other than the RPS.

In cases where the "Annual Generation Claimed" exceeds the "Eligible Generation Amount," Energy Commission staff requested and reviewed meter data or invoices from the retail seller. If total generation amounts shown on the meter data or invoices equaled or exceeded the RPS claim, the claim was accepted as RPS-eligible. In cases where the meter data or invoiced generation amounts did not support claim amount, Energy Commission staff determined that the portion of the claim amount in excess of the generation amount was ineligible for the RPS. (See Chapter 3.)

For convenience, the template is provided below with footnotes explaining the headers for each column title in the tables that follow. The same template was used for all retail sellers.

**2011-2013 RPS Summary Claims Report Template**

Reporting Year	CEC RPS ID	Facility Name	Fuel Type	Vintage Year	Annual Generation Claimed (MWh)	Eligible Generation Amount (MWh)	Amount Ineligible
----------------	------------	---------------	-----------	--------------	---------------------------------	----------------------------------	-------------------

**Column Definitions**

- A. Reporting Year:** The year for which the generation claimed was retired for the RPS.
  
- B. CEC RPS ID:** The California Energy Commission assigns this RPS Certification identification number to the generating facility
  
- C. Facility Name:** The facility name as provided to the Energy Commission when the facility applied for certification.
  
- D. Fuel Type:** The primary renewable fuel type as provided to the Energy Commission when the facility applied for certification. In some cases, the fuel type may be different than, or not as specific as, what was reported in the WREGIS Compliance Report and/or CEC-RPS-Track form.
  
- E. Vintage Year:** The year that the generation claimed was generated.
  
- F. Annual Generation Claimed (MWh):** The procurement amount shown in this column is the amount reported by the LSE to the Energy Commission in the WREGIS Compliance Report and/or CEC-RPS-Track form for the facility for the vintage year and reporting year.
  
- G. Eligible Generation Amount (MWh):** The generation totals in this column are based on data supplied by the CEC-RPS-GEN form and CEC-RPS-Multifuel form that collect facility-level generation information or are the result of the Energy Commission’s own determination using data reported on the CEC-RPS-Multifuel form.
  
- H. Amount Ineligible or Withdrawn:** This column lists the total ineligible or withdrawn amounts.
