# **CROCKETT COGENERATION PROJECT**

(92-AFC-1C)

**DOCKET** 

92-AFC-1C

DATE JAN 12 2012

RECD. JAN 23 2012

# **PETITION TO AMEND** THE CALFORNIA ENERGY COMMISSION **FINAL DECISION**

SUPPLEMENTAL DATA SUBMITTED JANUARY 12-20, 2012

### **Socioeconomics**

# Question 1: Will the proposed modifications require any additional operational workers to be hired?

**Answer:** No additional personnel will be required to operate the fuel compression equipment. The fuel compression equipment will have sufficient automation so it can be controlled from the plant's Control Room. In addition, the current plant staffing includes a couple of outside operators that are continuously monitoring the equipment operation.

### **Visual Resources**

Question 1: Can you provide height information about the equipment and a conceptual elevation depicting how the equipment will fit in with the existing facilities where the equipment is proposed to be located?

**Answer**: The height of the acoustical enclosure will be approximately 12 feet with a sloping roof.

I am attaching two files showing the compressor location before and after. As you can see, this spot is tucked in an area making views of it from a decent distance almost non-existent. This is the only decent location to shoot a photo and do a rendering from. This also demonstrates just how invisible the compression equipment will be to the outside world. It is dwarfed and surrounded by taller equipment/ structures.

See attachments 1 and 2: Proposed Compressor Location (current) and Proposed Compressor Location (rendering).

#### **Hazardous Materials**

Question 1: Can you provide a brief discussion of the applicability of NFPA 56PS: Standard for Fire and Explosion Prevention During Cleaning and Purging of Flammable Gas Piping Systems to the proposed project and if/how the project owner intends to comply with the Provisional Standard?

**Answer:** NFPA 56PS is applicable to this project in the sense that the project involves cutting and welding onto the natural gas pipeline that feeds the fuel to the gas turbine. In that context, NFPA 56PS is applicable to the purging of the line before it is worked on and after the work is completed as it will required to be blown down to make sure that the line is free from debris before the gas can be re-introduced into the gas turbine.

Crockett is insuring compliance with NFPA56PS by:

- Crockett will utilize a mechanical contractor that is intimately familiar and experienced with NFPA 56PS and the applicable processes of emptying and purging gas pipelines before and after cutting and welding activities take place. The contractor will utilize pipefitters and code welders that are familiar with the requirements of NFPA 56PS.
- All purging and gas blowing will be accomplished by using oil-free air compressors.
- A safety coordinator who is also intimately familiar with NFPA 56PS will be on site coordinating these
  activities.
- A Standard Operating Procedure (SOP) will be produced for these particular parts of the
  project. This SOP will incorporate the requirements from NFPA 56PS as well as other codes and
  standards and will be part of the Fire Safety Plan to be reviewed and approved by the Contra Costa
  County Fire Department Fire Chief in the City of Crockett.
- As part of the Daily Safety Briefing we will hold a Contractor Safety Orientation that will insure

that everybody involved in the project will be required to become familiar with the SOP and Fire Safety Plan.

### Geology

Question Geo-1: Please explain why the foundation type changed from that recommended in the geotechnical report.

**Answer Geo-1:** When the description of the foundation design was written, the prevailing idea was to use the Chance Helical Pier. At that time, the Geotech report had not yet been received. Based on the Geotech report, the project owner is proposing two options; one being a shallow mat using micro piers and the other being a thicker slab on a 6 foot excavation re-filled and compacted. Project Owner is preparing a final design that is compatible with both options.

Question Geo-2: Please provide the plans indicating the deep foundation was designed by a professional engineer.

**Answer Geo-2:** Please see attached drawings for the design of the foundation options described above. These are preliminary drawings subject to final revisions.

### Question Geo-3: Please provide the following:

- 1) a detailed description of the "micro piles"
- 2) the method of installation of the micro piles
- 3) whether or not the micro piles will extend into stiff native soils
- 4) whether or not the micro piles are to be constructed in drill borings
- 5) address provision of information for soil characterization and subsequent disposal methods of the drillspoils (as applicable).

#### Answer Geo-3:

- 1) No micro piles will be used in the chosen foundation. The foundation will be Option 2 detailed on drawing S2.15. Project owner should get final foundation drawings from Project owner's engineering consultant, Cannon Corp., by January 27, 2012.
- 2) N/A. See response to question 1, above.
- 3) N/A. See response to question 1, above.
- 4) N/A. See response to question 1, above.
- 5) Amec, the project owner's geotechnical consultant, has been contracted to do boring, sampling and testing of the existing soil for waste characterization in the event that some of the soil needs to be landfilled. In the event that excavated soil needs to be landfilled, if such soil is determined to be hazardous it will be sent to US Ecology, Inc.'s Hazardous Waste Treatment and Disposal Facility located in Beatty, Nevada.

If some of the excavated soil needs to be landfilled and it is not characterized as hazardous, it will be transported to the Canyon landfill located in Pittsburg, California for disposal.

According to the foundation Design (Option 2, Drawing S2.15), the maximum estimated amount of soil that may need to be landfilled is approximately 2,700 cubic feet. This is approximately 5 truckloads of soil. Please note that it is project owner's

#### Water

Question Water-1: Please explain how the equipment will be cooled.

**Answer Water-1:** There will be no water needed for cooling of the equipment. The only cooling needed will be for the lube oil of the compressor and that will be handled by an oil/air heat exchanger.

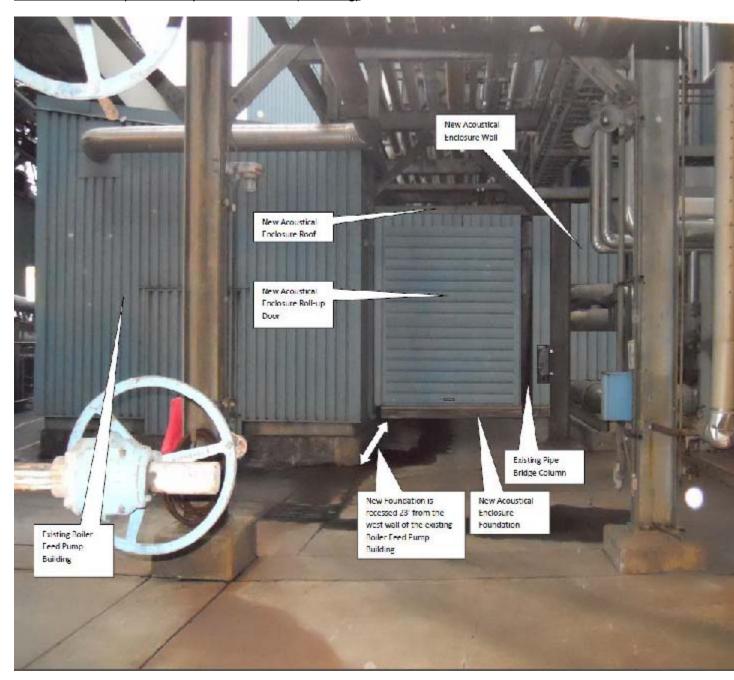

**Question Water-2:** If the equipment will be cooled using evaporative processes, please provide a description of the coolers and how much water is anticipated to be required.

Answer Water-2: N/A.

Attachment 1: Proposed Compressor Location (current)

Attachment 2: Proposed Compressor Location (rendering)

Attachment 3: Compressor Building Foundation Plan Options and Structural Details (subject to final revisions)

## GENERAL NOTES

- 1. CONSTRUCTION SHALL COMPLY WITH THE LATEST EDITION OF THE CALIFORNIA BUILDING CODE (CBC), IBC STANDARDS, IBC ADOPTED STANDARDS, AND IBC RECOGNIZED STANDARDS AS LISTED ON PREVIOUS PAGE.
- 2. THE CONSTRUCTION DOCUMENTS REPRESENT THE FINISHED STRUCTURE AND DO NOT INDICATE METHODS, PROCEDURES OR SEQUENCE OF CONSTRUCTION. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO TAKE NECESSARY PRECAUTIONS TO MAINTAIN AND ENSURE THE INTEGRITY OF THE STRUCTURE DURING CONSTRUCTION. NEITHER THE OWNER NOR ARCHITECT OR STRUCTURAL ENGINEER WILL ENFORCE SAFETY MEASURES OR REGULATIONS. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO DESIGN, CONSTRUCT AND MAINTAIN ALL SAFETY DEVICES, INCLUDING BUT NOT LIMITED TO TEMPORARY GUARDRAILS, SHORING AND BRACING. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR CONFORMING TO LOCAL, STATE AND FEDERAL SAFETY AND HEALTH STANDARDS, LAWS AND REGULATIONS.
- 3. PROVIDE INSPECTIONS IN ACCORDANCE WITH CBC SECTION 108.4 AND AS SPECIFIED IN "TESTS AND SPECIAL INSPECTIONS". NOTES PROVIDED.
- 4. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO COORDINATE THE WORK OF THE SUB-CONTRACTORS AND TO CHECK DIMENSIONS. DISCREPANCIES SHALL BE CONVEYED TO THE ATTENTION OF THE ARCHITECT AND THE STRUCTURAL ENGINEER IN A TIMELY MANNER TO BE RESOLVED BEFORE PROCEEDING.
- 5. STRUCTURAL MEMBERS SHALL NOT BE CUT, NOTCHED OR OTHERWISE PENETRATED UNLESS SPECIFICALLY APPROVED BY THE STRUCTURAL ENGINEER IN ADVANCE OR SHOWN ON THESE DRAWINGS. NO CHANGES ARE TO BE MADE TO THESE PLANS WITHOUT THE KNOWLEDGE AND WRITTEN CONSENT OF THE STRUCTURAL ENGINEER MATERIALS SHALL BE FURNISHED AS SHOWN HEREIN UNLESS EQUAL ALTERNATES ARE APPROVED IN WRITING BY THE OWNER AND THE STRUCTURAL ENGINEER.
- 6. DETAILS NOT SPECIFICALLY SHOWN SHALL BE SIMILAR TO DETAILS FOR SIMILAR CONSTRUCTION SHOWN ON THESE DRAWINGS.
- 7. TYPICAL DETAILS SHALL APPLY UNLESS NOTED OTHERWISE ON THE DRAWINGS.

PRECEDENCE OVER GENERAL NOTES.

- 8. WHERE THE GENERAL NOTES AND THE TYPICAL DETAILS ARE IN CONFLICT WITH THE SPECIFICATIONS, THE GENERAL NOTES AND TYPICAL DETAILS SHALL GOVERN. NOTES AND DETAILS WITHIN THESE DRAWINGS TAKE
- 9. DO NOT SCALE DRAWINGS. DRAWING SCALES GIVEN ARE APPROXIMATE. DIMENSIONS AND ELEVATIONS MUST BE VERIFIED WITH ARCHITECTURAL DRAWINGS. DISCREPANCIES SHALL BE CONVEYED TO THE ARCHITECT AND THE STRUCTURAL ENGINEER TO BE RESOLVED PRIOR TO PROCEEDING.
- 10. REFER TO ARCHITECTURAL AND CIVIL DRAWINGS FOR DIMENSIONS, SLOPES, DEPRESSIONS AND OTHER INFORMATION NOT SPECIFICALLY SHOWN ON THE STRUCTURAL DRAWINGS.
- 11. OPENINGS, POCKETS, ETC. SHALL NOT BE PLACED IN FOUNDATIONS, SLABS, WALLS, SHEAR WALLS, DECKS GIRDERS, BEAMS, JOISTS, COLUMNS, ETC. UNLESS SPECIFICALLY DETAILED ON THE STRUCTURAL DRAWINGS. NOTIFY THE STRUCTURAL ENGINEER IF MECHANICAL OR OTHER DRAWINGS SHOW OPENINGS, POCKETS, ETC. WHICH ARE NOT SHOWN ON THE STRUCTURAL DRAWINGS.
- 12. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO LOCATE EXISTING UTILITIES WHETHER SHOWN HEREON OR NOT, AND TO PROTECT THEM FROM FROM DAMAGE. THE CONTRACTOR SHALL BEAR THE EXPENSE OF REPAIR OR REPLACEMENT IN CONJUNCTION WITH THE EXECUTION OF THIS WORK.
- 13. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO COORDINATE DETAILS TO AVOID THE INTERFERENCE OF EMBEDDED ITEMS, INCLUDING BUT NOT LIMITED TO REINFORCING STEEL, PRE-STRESSED STEEL AND HARDWARE AS WELL AS MISCELLANEOUS STEEL AND CONDUITS.
- 14. UNLESS SPECIFICALLY SHOWN OR NOTED ON THE STRUCTURAL DRAWINGS, ANCHOR BOLTS OR INSETS FOR EQUIPMENT ANCHORAGE OR INSTALLATION SHALL BE DESIGNED BY A CIVIL OR STRUCTURAL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA, AND SHALL BE SHOWN ON THE MECHANICAL AND/OR ELECTRICAL DRAWINGS.
- 15. GENERAL CONTRACTOR SHALL VISIT THE JOB SITE AND VERIFY ALL GRADES, DIMENSIONS, AND CONDITIONS PRIOR TO BIDDING AND COMMENCING CONSTRUCTION. DIMENSIONS CONTROLLED BY EXISTING CONDITIONS SHALL BE VERIFIED BY THE CONTRACTOR AT THE SITE.
- 16. CONNECTIONS OF ITEMS SUPPORTED BY THE STRUCTURE ARE THE RESPONSIBILITY OF THE DISCIPLINES WHO ARE MAKING THESE ATTACHMENTS. THESE ATTACHMENTS SHALL BE DESIGNED TO RESIST GRAVITY, WIND, SEISMIC, THERMAL LOADS, ETC.
- 17. UNLESS SPECIFICALLY NOTED, VIBRATION EFFECTS OF MECHANICAL EQUIPMENT HAS NOT BEEN CONSIDERED BY THE STRUCTURAL ENGINEER.
- 18. MATERIALS USED IN THIS DESIGN MAY BE HAZARDOUS TO ONES HEALTH. THE CONTRACTOR SHALL ACCEPT ALL RESPONSIBILITY AND SHALL POST SUCH WARNING DURING CONSTRUCTION.
- 19. THE WORDS "INSPECT", "VERIFY", "TEST", AND "APPROVE" AS USED ON THESE PLANS AND SPECIFICATIONS REPRESENT THAT THE PROJECT ENGINEER OR PROJECT GEOTECHNICAL ENGINEER HAVE PERFORMED TESTS, INSPECTIONS AND OBSERVATIONS ON BEHALF OF THE OWNER TO HAVE REASONABLE CERTAINTY THAT, IN THEIR PROFESSIONAL OPINION, THE CONTRACTOR'S WORK HAS BEEN PERFORMED IN SUBSTANTIAL CONFORMANCE WITH THESE PLANS AND SPECIFICATIONS. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR FULL COMPLIANCE WITH THE CONTRACT DOCUMENTS. THE ENGINEER WILL NEITHER DIRECT NOR TAKE RESPONSIBILITY OF THE CONTRACTOR'S WORK OR OBLIGATIONS.

# **FOUNDATIONS**

- 1. THE ELEVATIONS OF FOUNDATIONS AS SHOWN ON THESE DRAWINGS INDICATE THE ESTIMATED MINIMUM FOUNDATION DEPTHS. ELEVATIONS SHOWN ARE FOR BIDDING PURPOSES ONLY AND ARE ASSUMED TO BE IN SUITABLE BEARING MATERIAL. ADEQUACY OF THE BEARING MATERIALS AND ANY REQUIRED OVER EXCAVATION AND COMPACTION SHALL BE DETERMINED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF REINFORCING STEEL AND CONCRETE.
- 2. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE THE DESIGN AND INSTALLATION OF ANY CRIBBING, SHEATHING AND SHORING REQUIRED TO SAFELY RETAIN EARTH BANKS DURING EXCAVATION AND FOR FORMING AND PLACEMENT OF CONCRETE. CUTS AND SLOPES TO MEET REQUIREMENTS OF THE GEOTECHNICAL REPORT.
- 3. THE BOTTOM OF FOOTINGS SHALL BE LEVEL. CHANGES IN FOOTING ELEVATIONS SHALL BE MADE UTILIZING THE TYPICAL FOOTING STEP DETAIL WITHIN THESE DRAWINGS.
- 4. CENTER FOOTINGS UNDER WALLS OR COLUMNS UNLESS OTHERWISE INDICATED ON THESE DRWAINGS.
- 5. DEWATER FOOTING AND BUILDING EXCAVATIONS AS REQUIRED TO MAINTAIN DRY WORKING CONDITIONS.
- 6. EXCAVATIONS SHALL BE PROPERLY BACKFILLED. DO NOT PLACE BACKFILL BEHIND RETAINING WALLS BEFORE CONCRETE AND/OR MASONRY HAS ATTAINED SPECIFIED 28—DAY COMPRESSIVE STRENGTH. CONTRACTOR SHALL BRACE OR PROTECT BUILDING AND PIT WALLS BELOW GRADES FROM LATERAL LOADS UNTIL SUPPORTING FLOORS AND OR ROOFS ARE IN PLACE AND HAVE ATTAINED FULL STRENGTH.
- 7. FOOTING AND UTILITY TRENCH BACKFILL WITHIN BUILDING AREA SHALL BE MECHANICALLY COMPACTTED IN LAYERS TO THE APPROVAL OF THE GEOTECHNICAL ENGINEER. FLOODING WILL NOT BE PERMITTED.
- 8. ABANDONDED FOOTINGS, UTILITIES, ETC. THAT INTERFERE WITH NEW CONSTRUCTION SHALL BE REMOVED.
- 9. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO DESIGN AND CONSTRUCT PERMANENT SHORING, BRACING, UNDERPINNING, ETC. OF ADJACENT PROPERTIES AND BUILDINGS PER THE CBC.
- 10. FOOTING ELEVATIONS SHALL BE LOCATED SUCH THAT THE BASES OF THE BUILDING FOUNDATIONS ARE A MINIMUM HORIZONTAL DISTANCE FROM THE FACE OF THE SLOPE PER CBC AND/OR LOCAL JURISDICTION.
- 11. AVOID FOOTING PENETRATIONS AND TRENCHING NEAR FOOTINGS. WHERE UNAVOIDABLE, SEE TYPICAL PIPE AND TRENCH DETAILS.
- 12. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO BE FAMILIAR WITH AND OBTAIN A COPY OF THE GEOTECHNICAL REPORT AND RETAIN ON SITE AT ALL TIMES.
- 13. SITE PREPARATION, FILLING, BACKFILLING AND ANY
  OVEREXCAVATION/RECOMPACTION OR DEEP COMPACTION OF SOILS
  SHALL BE PERFORMED PER RECOMMENDATIONS PRESENTED IN THE
  GEOTECHNICAL REPORT AND INSPECTED AND APPROVED BY THE
  PROJECT GEOTECHNICAL ENGINEER PRIOR TO EXCAVATING AND FORMING
  OF FOOTINGS. FOOTING EXCAVATIONS SHALL BE INSPECTED AND
  APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO PLACEMENT OF
  REINFORCING.
- 14. THE FOUNDATION PLAN AND RELATED DETAILS SHALL BE REVIEWED AND APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO APPROVAL BY THE LOCAL BUILDING OFFICIAL.
- 15. EMBEDED ITEMS MUST BE TIED IN PLACE PRIOR TO FOUNDATION INSPECTION.

# REINFORCING STEEL

- DETAILING, FABRICATION AND ERECTION OF REINFORCING BARS SHALL CONFORM TO THE REQUIREMENTS OF THE ACI MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES ACI 315, LATEST EDITION.
- 2. WELDING OF REINFORCING STEEL, WHERE SPECIFICALLY NOTED OR DETAILED, SHALL CONFORM TO IBC STANDARDS AND AWS STANDARDS, USING LOW HYDROGEN ELECTRODES.
- 3. TO HOLD REINFORCING BARS IN THEIR TRUE POSITION AND PREVENT DISPLACEMENT, STANDARD TIE AND ANCHORAGE DEVICES MUST BE PROVIDED. PLACING OF REINFORCEMENT SHALL CONFORM TO THE CBC.
- 4. ALL REINFORCING BAR BENDS SHALL BE MADE COLD. REINFORCING BARS SHALL NOT BE RE-BENT WITHOUT APPROVAL OF STRUCTURAL ENGINEER.
- 5. LAP SPLICES FOR REINFORCING BARS SHALL BE PER THE REINFORCING SCHEDULE ON THESE DRAWINGS. WIRE BARS TOGETHER AT LAPS OR SPLICES. STAGGER LAPS IN ADJACENT HORIZONTAL OR SLOPING REINFORCING BARS A MINIMUM OF THE REQUIRED SPLICE LENGTH. SPLICES AT OTHER LOCATIONS SHALL BE REVIEWED BY THE STRUCTURAL ENGINEER ALL VERTICAL WALL REINFORCEMENT SHALL BE CONTINUOUS BETWEEN SPLICE LOCATIONS SHOWN IN THE DETAILS.
- 6. REINFORCING STEEL SHALL BE CLEAN, FREE OF EXCESSIVE RUST, GREASE, OIL OR OTHER MATERIAL LIKELY TO IMPAIR BOND.

7. SPACING OF BARS SHALL BE CONSIDERED AS MAXIMUM SPACING.

# REINFORCED CONCRETE

BARS #5 AND SMALLER:

- CONCRETE SHALL DEVELOP A MINIMUM ULTIMATE COMPRESSIVE STRENGTH PER MATERIAL PROPERTIES.
- CONCRETE WORK SHALL CONFORM TO THE REQUIREMENTS OF THE LATEST EDITIONS OF THE CBC AND ACI STANDARD 318, UNLESS SHOWN OR NOTED OTHERWISE ON THESE DRAWINGS.
- FORMS FOR CONCRETE SHALL BE LAID OUT AND CONSTRUCTED TO PROVIDE FOR ANY REQUIRED CAMBERS.
- 4. CLEAR DISTANCE BETWEEN PARALLEL REINFORCEMENT SHALL NOT BE LESS THAN 2 TIMES THE NOMINAL DIAMETER OF THE REINFORCEMENT, OR 1-1/3 TIMES MAXIMUM SIZE AGGREGATE, NOR LESS THAN 1-1/2".
- 5. REINFORCING STEEL IN NON-PRESTRESSED CAST-IN-PLACE CONCRETE SHALL HAVE A MINIMUM COVER AS FOLLOWS, UNLESS NOTED OTHERWISE:
- CONCRETE AGAINST EARTH (UNFORMED): 3 IN.
   CONCRETE AGAINST EARTH (FORMED) AND EXPOSED TO WEATHER: BARS #6 AND LARGER: 2 IN.
- CONCRETE NOT EXPOSED TO WEATHER OR IN CONTACT WITH EARTH:

  SLABS AND WALLS (#11 BARS AND SMALLER): —IN.

  BEAMS (TIES, STIRRUPS AND SPIRALS): 1½ IN.

  UNPROTECTED COLUMNS: 2½ IN.

1 ½ IN.

- 6. PROVIDE SLEEVES FOR ANY PIPING PASSING THROUGH STRUCTURAL CONCRETE BEFORE PLACING CONCRETE. CORING IN CONCRETE IS NOT PERMITTED EXCEPT AS SHOWN SEE TYPICAL DETAILS. NOTIFY STRUCTURAL ENGINEER IN ADVANCE OF CONDITIONS NOT SHOWN ON THE DRAWINGS.
- 7. ALL REINFORCING STEEL, WIRE MESH, ANCHOR BOLTS, HOLD DOWN ANCHORS AND OTHER INSERTS OR EMBEDED ITEMS SHALL BE PLACED ACCURATELY AND SECURED BEFORE BEGINNING CONCRETE PLACEMENT. STABBING OF ANCHOR BOLTS OR REINFORCING INTO WET CONCRETE IS NOT ALLOWED.
- 8. PROVIDE 6% ENTRAINED AIR BY VOLUME WITH ADMIXTURE PER ASTM C260 FOR SITES ABOVE 1500 FEET IN ELEVATION.
- 9. CONCRETE SHALL BE CONSOLIDATED BY MECHANICAL VIBRATORS.
- 10. CONCRETE SHALL BE PLACED IN ACCORDANCE WITH ASTM C94 AND ACI STANDARD 304.
- 11. LOCATION OF CONSTRUCTION JOINTS NOT SPECIFIED IN THESE DRAWINGS MUST BE REVIEWED BY THE STRUCTURAL ENGINEER.
- 12. CURE EXPOSED CONCRETE SURFACES WITH LIQUID MEMBRANE—FORMING CURING COMPOUND CONFORMING TO ASTM C309, TYPE 1, CLASS A OR OTHER APPROVED CURING METHOD IMMEDIATELY AFTER PLACING CONCRETE. WHERE PLACEMENT OCCURS IN TEMPERATURES OVER 90°F OR IN WINDY CONDITIONS, CONTRACTOR SHALL TAKE ADDITIONAL MEASURES TO INSURE PROPER CONCRETE CURING. IF CONTROL JOINT SAW—CUTTING TAKES PLACE AFTER APPLICATION OF CURING COMPOUND, RE—APPLY CURING COMPOUND TO SAWCUTS.
- 13. WHEN COLD WEATHER CONDITIONS EXIST, PLACE CONCRETE IN COMPLIANCE WITH CBC.
- 14. WHEN HOT WEATHER CONDITIONS EXIST, PLACE CONCRETE IN COMPLIANCE WITH THE CBC. REINFORCING SHALL BE KEPT COOL DURING PLACEMENT OF CONCRETE.
- 15. CONCRETE SLAB ON GRADE SHALL HAVE CONTROL JOINTS AS SHOWN ON THE FOUNDATION PLAN AS SOON AS EQUIPMENT CAN BE OPERATED WITHOUT DAMAGING THE SLAB.
- 16. WHEN CONCRETE IS PLACED AGAINST EXISTING CONCRETE WALL PANELS AND FOOTINGS SURFACES, EXISTING CONCRETE SURFACES SHALL BE THOROUGHLY CLEANED AND ROUGHENED TO AN AMPLITUDE OF 1/4" MINIMUM. A CONCRETE BONDING AGENT SHALL BE APPLIED TO THE EXISTING CONCRETE SURFACE.

# STATEMENT OF SPECIAL AND OTHER INSPECTIONS

THIS STATEMENT OF SPECIAL AND OTHER INSPECTIONS IS SUBMITTED IN FULFILLMENT OF THE REQUIREMENTS OF CBC SECTIONS 1704 AND 1705. THIS STATEMENT SUPERCEDES ALL OTHER REFERENCES IN THE PLANS AND SPECIFICATIONS CONCERNING SUBMITTAL AND RETAINAGE OF SPECIAL INSPECTORS. INCI UDED ARE:

INCLUDED ARE:

• SCHEDULE OF SPECIAL INSPECTIONS AND TESTS APPLICABLE TO THIS PROJECT:

SPECIAL INSPECTIONS PER SECTIONS 1704 AND 1705

SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE

SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE
SPECIAL INSPECTIONS FOR WIND RESISTANCE
• LIST OF THE TESTING AGENCIES AND OTHER SPECIAL INSPECTORS THAT WILL BE RETAINED TO CONDUCT THE TESTS AND INSPECTIONS.

PLANS AND SPECIFICATIONS, THIS STATEMENT AND CBC SECTIONS 1704, 1705, 1707, AND 1708.

THE SCHEDULE OF SPECIAL INSPECTIONS SUMMARIZES THE SPECIAL INSPECTIONS AND TESTS REQUIRED. SPECIAL INSPECTORS WILL REFER TO THE APPROVED PLANS AND SPECIFICATIONS FOR DETAILED SPECIAL INSPECTION REQUIREMENTS. ANY ADDITIONAL TESTS AND INSPECTIONS REQUIRED BY THE APPROVED PLANS

SPECIAL AND OTHER INSPECTIONS AND TESTING WILL BE PERFORMED IN ACCORDANCE WITH THE APPROVED

AND SPECIFICATIONS WILL ALSO BE PERFORMED.

INTERIM REPORTS WILL BE SUBMITTED TO THE BUILDING OFFICIAL AND THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE (ENGINEER OF RECORD) IN ACCORDANCE WITH CBC SECTION

A FINAL REPORT OF SPECIAL INSPECTIONS DOCUMENTING REQUIRED SPECIAL INSPECTIONS, TESTING AND CORRECTION OF ANY DISCREPANCIES NOTED IN THE INSPECTIONS SHALL BE SUBMITTED PRIOR TO ISSUANCE OF A CERTIFICATE OF USE AND OCCUPANCY (SECTION 1704.1.2). ALL SPECIAL INSPECTION FINAL REPORTS SHALL BE SUBMITTED TO THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE (ENGINEER OF RECORD) FOR COMPILATION AND SUBMITTAL TO THE BUILDING OFFICIAL. THE FINAL REPORTS WILL

REQUIRED SPECIAL INSPECTIONS.
 CORRECTION OF DISCREPANCIES NOTED IN INSPECTIONS.

THE OWNER RECOGNIZES HIS OR HER OBLIGATION TO ENSURE THAT THE CONSTRUCTION COMPLIES WITH THE APPROVED PERMIT DOCUMENTS AND TO IMPLEMENT THIS PROGRAM OF SPECIAL INSPECTIONS. IN PARTIAL FULFILLMENT OF THESE OBLIGATIONS, THE OWNER WILL RETAIN AND DIRECTLY PAY FOR THE SPECIAL INSPECTIONS AS REQUIRED IN CBC SECTION 1704.1.

THIS PLAN HAS BEEN DEVELOPED WITH THE UNDERSTANDING THAT THE BUILDING OFFICIAL WILL:

• REVIEW AND APPROVE THE QUALIFICATIONS OF THE SPECIAL INSPECTORS WHO WILL PERFORM THE INSPECTIONS.

• MONITOR SPECIAL INSPECTION ACTIVITIES ON THE JOB SITE TO ASSURE THAT THE SPECIAL INSPECTORS ARE QUALIFIED AND ARE PERFORMING THEIR DUTIES AS CALLED FOR IN THIS STATEMENT OF SPECIAL

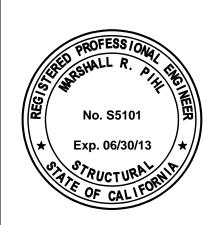

REVIEW SUBMITTED INSPECTION REPORTS.
PERFORM INSPECTIONS AS REQUIRED BY THE LOCAL BUILDING CODE.

4. Material verification of weld filler materials:  a. laterification and welding:  b. Manufacturer's certificate of compliance required.  5. Inspection of welding:  a. Structural steel  1) Complete and partial penetration groove welds.  X  2) Multipless fillet welds > 5/10°,  4. Structural steel  5. Filler and reed feed welds. Reinforcing steel resident resisting floxural and axis forces in Intermediate and special moment frames, and boundary elements of special reinforced concrete shear walls, and shear reinforcement.  3. Shear reinforcement.  4. Other reinforcing steel  1. Inspection of reinforcing steel welding in accordance with table 1704.4- Concrete  1. Inspection of reinforcing steel welding in accordance with table 1704.5 hims 5.  3. Inspect bots to be installed in concrete prior to and during placement of concrete where allowable loads have been increased.  5. Verifying use of required design mix.  X  Each design mix shall be submitted to the engineer of production or delicery to the site for strength tests, perform alump and are contents.  3. Inspect bots to be installed in concrete.  3. At time fresh concrete and shotorete pictor and during placement of concrete were allowable loads have been increased.  5. Verifying use of required design mix.  X  Each design mix shall be submitted to the engineer of very production or delicery to the site for strength tests, perform alump and are contents.  3. Inspect bots to be installed in concrete.  3. Inspect the temperature of the concrete.  4. Verify use of strength and testing are adequate to scrivers the design of control of the materials.  3. Proform classified an and testing of co	Table 1704.3 - Steel	•		•
designation listed in the WPS.  b. Municulaturario conflictate of compliance required.  c. Inspection of veriding: a. Structural steel 11. Complete and gardial penetration groove weige. X 21. Multipass fillet weigls > 5/16*. X 31. Shople-seas fillet weigls > 5/16*. X 42. Shiple-seas fillet weigls > 5/16*. X 53. Figure and roof debt weigls. b. Paintending alea! 1) Verification of weightly of reinforcing steel other than ASTN A706. 2) Penitorolog alea! 1) Verification of weightly of reinforcing steel other than ASTN A706. 2) Penitorolog steel residing flexural and axial forces in intermediate and special moment frames, and boundary elements of special inforces of intermediate and special moment frames, and boundary elements of special inforces domestee shear wails, and shear reinforcement.  3) Shear reinforcement.  X 4) Char resimilation and paceament. 4) Char resimilation gastel. Including prestressing tection of reinforcing steel weiging in accordance with Table 1704.4 Concrete 1. Inspection of reinforcing steel weiging in accordance with Table 1704.3 item 5b. 2. Inspection of reinforcing steel weiging in accordance with Table 1704.3 item 5b.  S. Verifying use of required design mitx.  X Each design mix shall be submitted to concrete allowable loads have been increased. 5. Verifying use of required design mitx.  X Each design mix shall be submitted to concrete and africance and a				
b. Manufacturar's certificate of compliance required.  5. Inspection of welding: a. Sucular steel 1) Complete and partial pereintation groove welds. 2) Militipess filler welds. 3) Single-base fillet welds - 5/16°. 4) Single-base fillet welds - 5/16°. 5) Filler and roof dekk welds. 5 Filler and roof dekk welds. 5 Filler and roof dekk welds. 5 Filler and roof dekk welds. 6 Filler and roof dekk welds. 7 Filler and roof dekk welds. 8 Filler welds - 5/16°. 7 Filler and roof dekk welds. 8 Filler foreign steel 1) Verification of weldability of reinforcing steel other than ASTM A70c. 2) Reinforcing steel resisting filerward and axial forces in Intermediate and special moment frames, and boundary elements of special reinforcing concrete shear walls, and shear reinforcement. 8 Filler f				
S. Inspection of veicing:  a. Structural stool  1) Complete and partial penetration groove welds.  2) Multibase Black walds.  3) Single-ness filled welds > 5/16°.  4) Single-ness filled welds > 5/16°.  5) Floor and not decide welds.  b. Reinforcing steel  1) Verification of veicidability of reinforcing steel other than ASTN A706.  2) Reinforcing steel-residing flowural and add afforces in instrumediate and special moment frames, and boundary elements of special minforced concrete sheer wells, and sheer reinforcement.  3) Sheer reinforcement.  4) Other reinforcing steel welding in accordance with a sheer wells, and sheer reinforcement.  3) Sheer reinforcement.  4) Other reinforcing steel welding in accordance with Table 1704.3 from 50.  2. Inspection of relinforchy steel welding in accordance with Table 1704.3 from 50.  5. Verifying use of required design mix.  X Each design mix shall be submitted to concrete allowable leads have been increased.  5. Verifying use of required design mix.  X Each design mix shall be submitted to into engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for accordance with a sample of a design mix.  X Each design mix shall be submitted to the engineer of record for the engineer of record or the engineer of record or the engineer of record in the engineer of record in the engineer of records as accordance with a sample per day for smaller bounds.  1. Verify materials below footings are adequate t	designation listed in the WPS.			
in Structural steel  1) Complete and partial penetration groovs welds.  2) Multipless Blet welds  3) Single-pass fillet welds > 5/16°.  4) Single-pass fillet welds > 5/16°.  5) Floor and roof deck welds.  6) Reinforcing steel a state of the roof and state of the s	b. Manufacturer's certificate of compliance required.			
1) Complete and pential pensitration groove welds. 2) Mid-peas filet welds. 3) Single-base fills welds > 5/16°. 4) Single-base fills welds > 5/16°. 5) Floor and roof dock welds. 5. Reinforcing steel 1) Verification of weldability of reinforcing steel other than ASTM A708. 2) Reinforcing steel steel fill glissural and adal forces in Intermediate and special moment frames, and boundary elements of special reinforced concrete shear walls, and shear reinforcement.  3) Shear reinforcement. 4 X 4) Other reinforcing steel including prestressing tendors and placement. 3) Shear reinforcement. 4 X 4) Other reinforcing steel, including prestressing tendors and placement. 5. Inspection of reinforcing steel welding in accordance with Table 1704.3 flam 5b. 3. Inspect bills to be installed in concrete prior to and during placement of concrete where allowable loads have been increased. 5. Verifying use of required design mix.  3. At time fresh concrete it is sampled to febricate specimens for strength lests, perform slump and air content tests and determine the temperature of the concrete.  5. At time fresh concrete and shotcrete placement for proper application fechniques.  7. Inspection of concrete and shotcrete placement for proper application fechniques.  7. Inspection of concrete and shotcrete placement for proper application fechniques.  7. Inspection of concrete and shotcrete placement for proper application fechniques.  7. Inspection of Solie 7. Inspection of Solie 8. At time fresh concrete member being formed.  7. Inspection of solie Refer to soli inspect to the site with the sample of a ratio of 1 sample per 24 cubic yeards or 1 sample per				
2) Multipass fillet weblas 5/16".  3) Single-seas fillet weblas 5/16".  4) Single-seas fillet weblas 5/16".  5) Floor and roof deck weblas.  5. Reinforcing steed  1) Verification of weldability of reinforcing steel other than ASTM A706.  2) Reinforcing steel relating fiscural and axial forces in intermediate and special moment frames, and boundary elements of apocial reinforced concrete element walls, and shear reinforcement.  3) Shear reinforcement.  4) Other reinforcement.  7) Shear reinforcement.  2) Table 1704.4 - Concrete  1. Inspection of reinforcing steel, industing prestressing tendors and placement.  2. Inspection of reinforcing steel, industing prestressing tendors and placement.  2. Inspection of reinforcing steel welding in accordance with Table 1704.3 item 50.  3. Inspect bots to be installed in concrete prior to and during placement of concrete of a required design mix.  2. Verifying use of required design mix.  2. At time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air contant tests and determine the tamperature of the concrete.  3. At time fresh concrete and shotcrete placement for proper application techniques.  4. Verify materials below foolings are adequate to achieve the design of concrete member being formed.  4. Verify materials below foolings are adequate to achieve the design becament of concrete member being formed.  4. Verify materials below foolings are adequate to achieve the design becament of concrete member being formed.  5. Verify materials below foolings are adequate to achieve the design of controlled fill materials.  4. Verify use of proper materials, densities and lift thicknessee during placement of controlled fill materials.  5. Perform dessilication and testing of controlled fill materials.  6. Verify the steel page and properly.		X		
3) Single-pass filled welds = 5/16". 4) Single-pass filled welds = 5/16". 5) Floor and roof dock welds. 5. Reinforcing sized 1) Verification of weldability of reinforcing sized other than ASTM A708. 2) Reinforcing sized and sized-resisting flexural and adial forces in Intermediate and special moment frames, and boundary elements of special reinforced concrete shear walls, and shear reinforcement. 3) Shear reinforcement. 4) Other reinforcing sized 1. Inspecial on d'eniforcing sized 2. Inspecial on d'eniforcing sized welding in accordance with Table 1704.3 ftem 50. 3. Inspecial on d'eniforcing sized welding in accordance with Table 1704.3 ftem 50. 5. Varifying use of required design mix.  X Each design mix shall be submitted to the engineer of record for acceptance prior increased. 5. Varifying use of required design mix.  X Each design mix shall be submitted to the engineer of record for acceptance prior roduction or delicary to the site for strangth tests, parform slump and all contant tests and determine the temperature of the concrete.  S. At time fresh concrete is sampled to fabricate specimens to determine the temperature of the concrete.  S. At time fresh concrete and shotorete placement for proper application techniques.  11. Inspection of concrete and shotorete placement for proper application techniques.  7. Inspection of concrete and shotorete placement for proper application techniques.  11. Inspect formwork for shape, location, and dimensions of the concrete member being formed.  12. Verify excavations are extended to proper depth and have reached proper materials.  3. Perform dessilication and testing of controlled fill materials.  4. Verify use of proper materials, densities and life thicknesses during placement of compaction of controlled fill.  5. Prior to placement of controlled fill, observe subgrade and verify that the test be not proper depending.				
4) Single-pass fillet weids is S/18°.  5) Filtor and roof decits weids.  5) Reinforcing steel  1) Verification of weidsbillty of reinforcing steel other than ASTM A708.  2) Reinforcing steel-resisting floweral and exist forces in Intermediate and special moment frames, and boundary elements of special reinforced concrete share walls, and share reinforcement.  3) Shear reinforcement.  4) Other reinforcing steel  7. Inspection of reinforcing steel weiding in accordance with rable 1704.3 item 5b.  8. Inspect botts to be installed in concrete prior to and during pleacement of concrete where allowable loads have been increased.  8. At time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air content tests and determine the temperature of the concrete.  8. At time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air content tests and determine the temperature of the concrete.  8. At time fresh concrete is sampled to fabricate specimens for strength tests, perform slump and air content tests and determine the temperature of the concrete.  8. At time fresh concrete and shotorete placement for proper application techniques.  7. Inspection of concrete member being formed.  1. Verify materials below footings are adequate to achieve the desired bearing capacity?  2. Verify excavations are extended to proper depth and have reached proper materials.  3. Perform dessification and testing of controlled till.  5. Perform dessification and testing of controlled till.  6. Perform dessification and testing of controlled till.  6. Perform dessification and testing of controlled till.  8. Perform dessification and testing of controlled till.  9. Perform dessification and performed subgraph and have reached perform materials.  1. Verify use of proper materials.  1. Verify use of proper materials.  2. Verify excavations are extended to proper depth and have reached performed.				†
5. Floor and reof deck weids.  b. Reinforcing steel  1) Varification of weidability of reinforcing steel other than ASTM A70s.  2) Reinforcing steel resisting flowural and adial forces in Intermediate and special moment frames, and boundary elements of special reinforced concrete sheer walls, and shear reinforcement.  3) Sheer rainforcement.  4) Other reinforcing steel  Table 1704.4 - Concrete  1.
